

High resolution (<100m) remote sensing Breakout Session 6 Report

Speakers: Kevin Ruddick, Stewart Bernard, Chuanmin Hu, Antoine Mangin, Nima Pahlevan, Quinten Vanhellemont

NEW!

Landsat-8 (30m, 15m) free of charge and easily available from USGS

Sentinel-2 (10m) free of charge and coming soon from ESA

Pléiades (2m, 70cm) at ~5-13€/km², programmable

Worldview-4 (1.8m, 50cm)

What new **processes, users, applications?**

What New **algorithms, processing challenges?**

Science & Environment

New processes, e.g. marine animal detection

Scientists count whales from space

By Jonathan Amos

for

Southern right whale

Worldview-2, 50cm

ct the

was
uevo

ires

- A baleen whale growing up to 18m in length

[Fretwell et al, Whales from Space: Counting Southern Right Whales by Satellite, Plosone, 2014]

New users and applications: e.g. Port of Zeebrugge

[Dredgingtoday.com]

Bird sanctuary

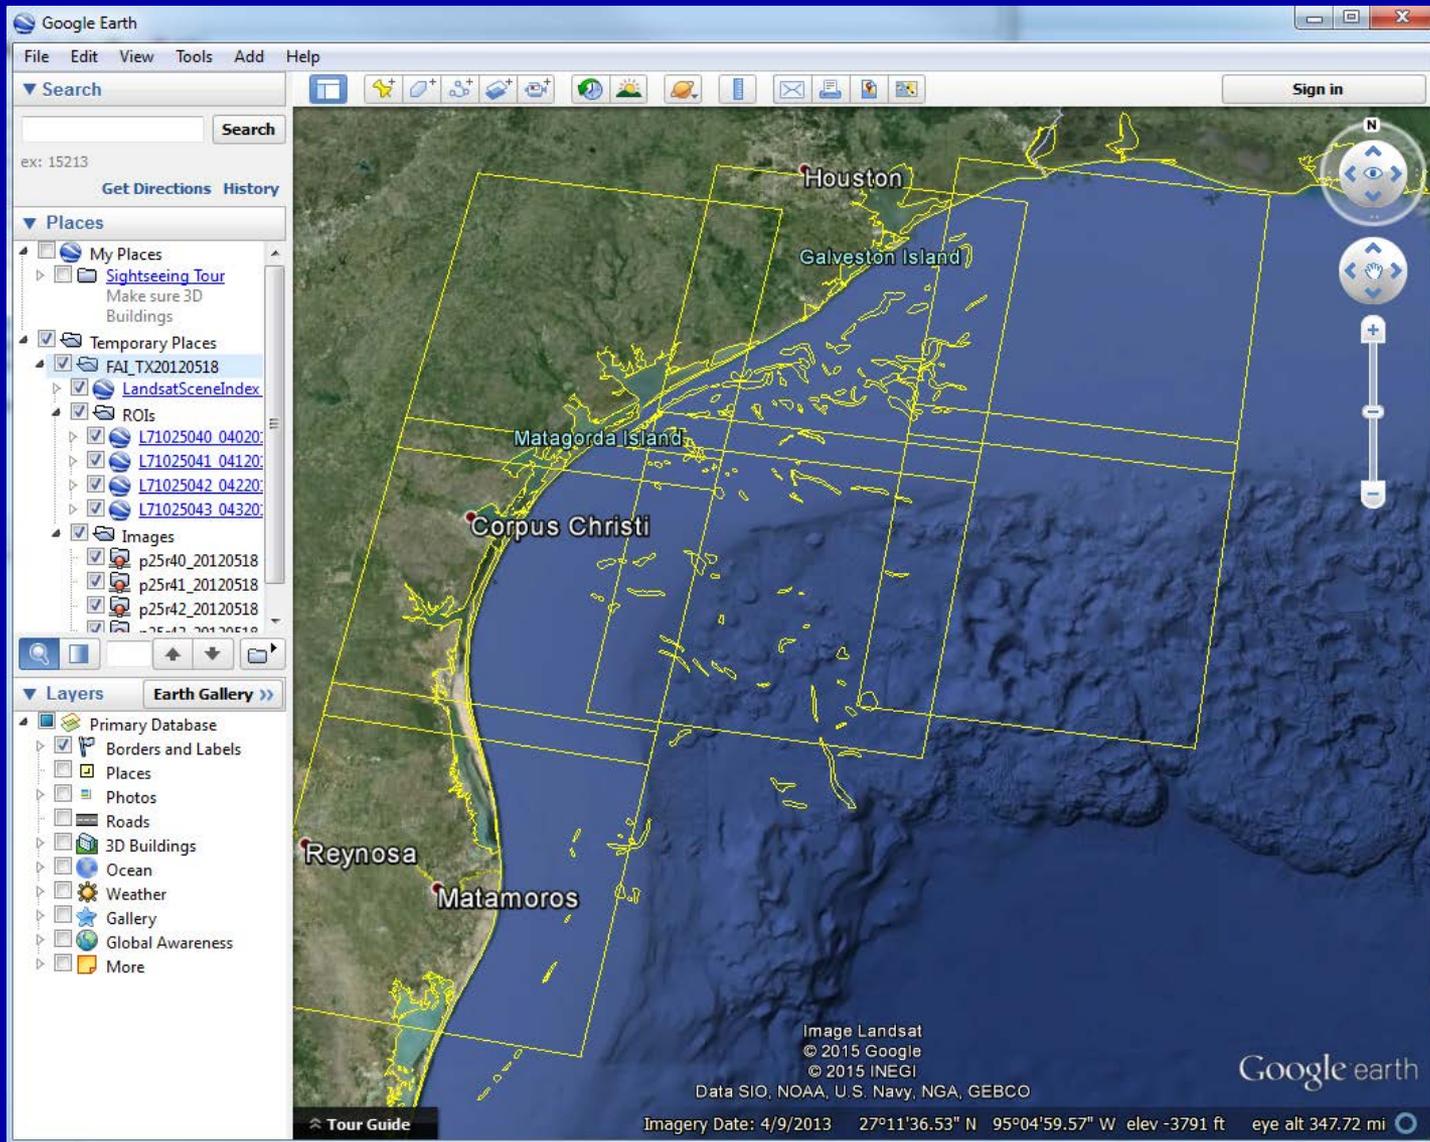

Black (anoxic?)
sediments

In/Out Water and Sediment
flux (and jellyfish ... ?)

Ships and wakes

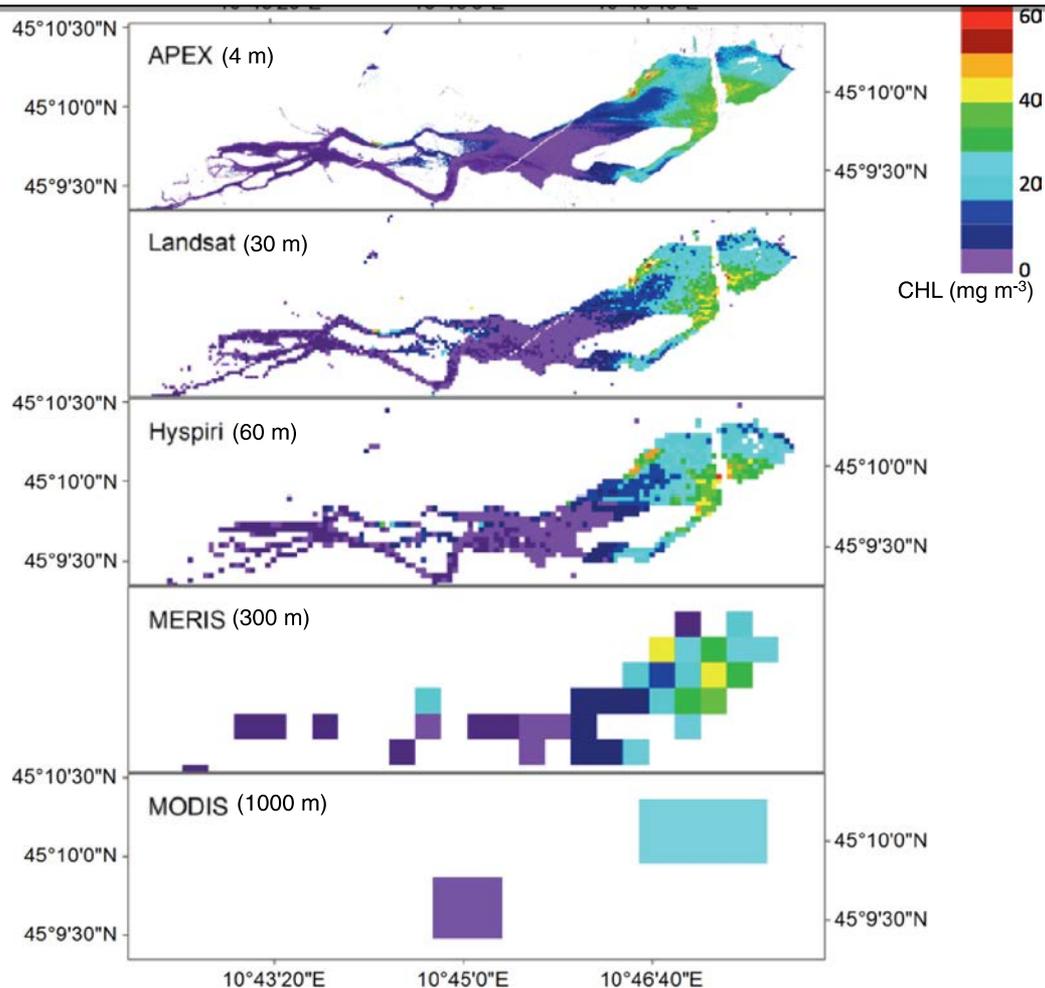

+Around port:
Beach change and tourism
Dumped WWI munitions

Spatial Resolution: Trade Offs from an Inland Perspective

Hestir, E.L., et al., Measuring freshwater aquatic ecosystems: The need for a hyperspectral global mapping satellite mission, Remote Sensing of Environment (2015), <http://dx.doi.org/10.1016/j.rse.2015.05.023>

Processes and features – seen better at high res

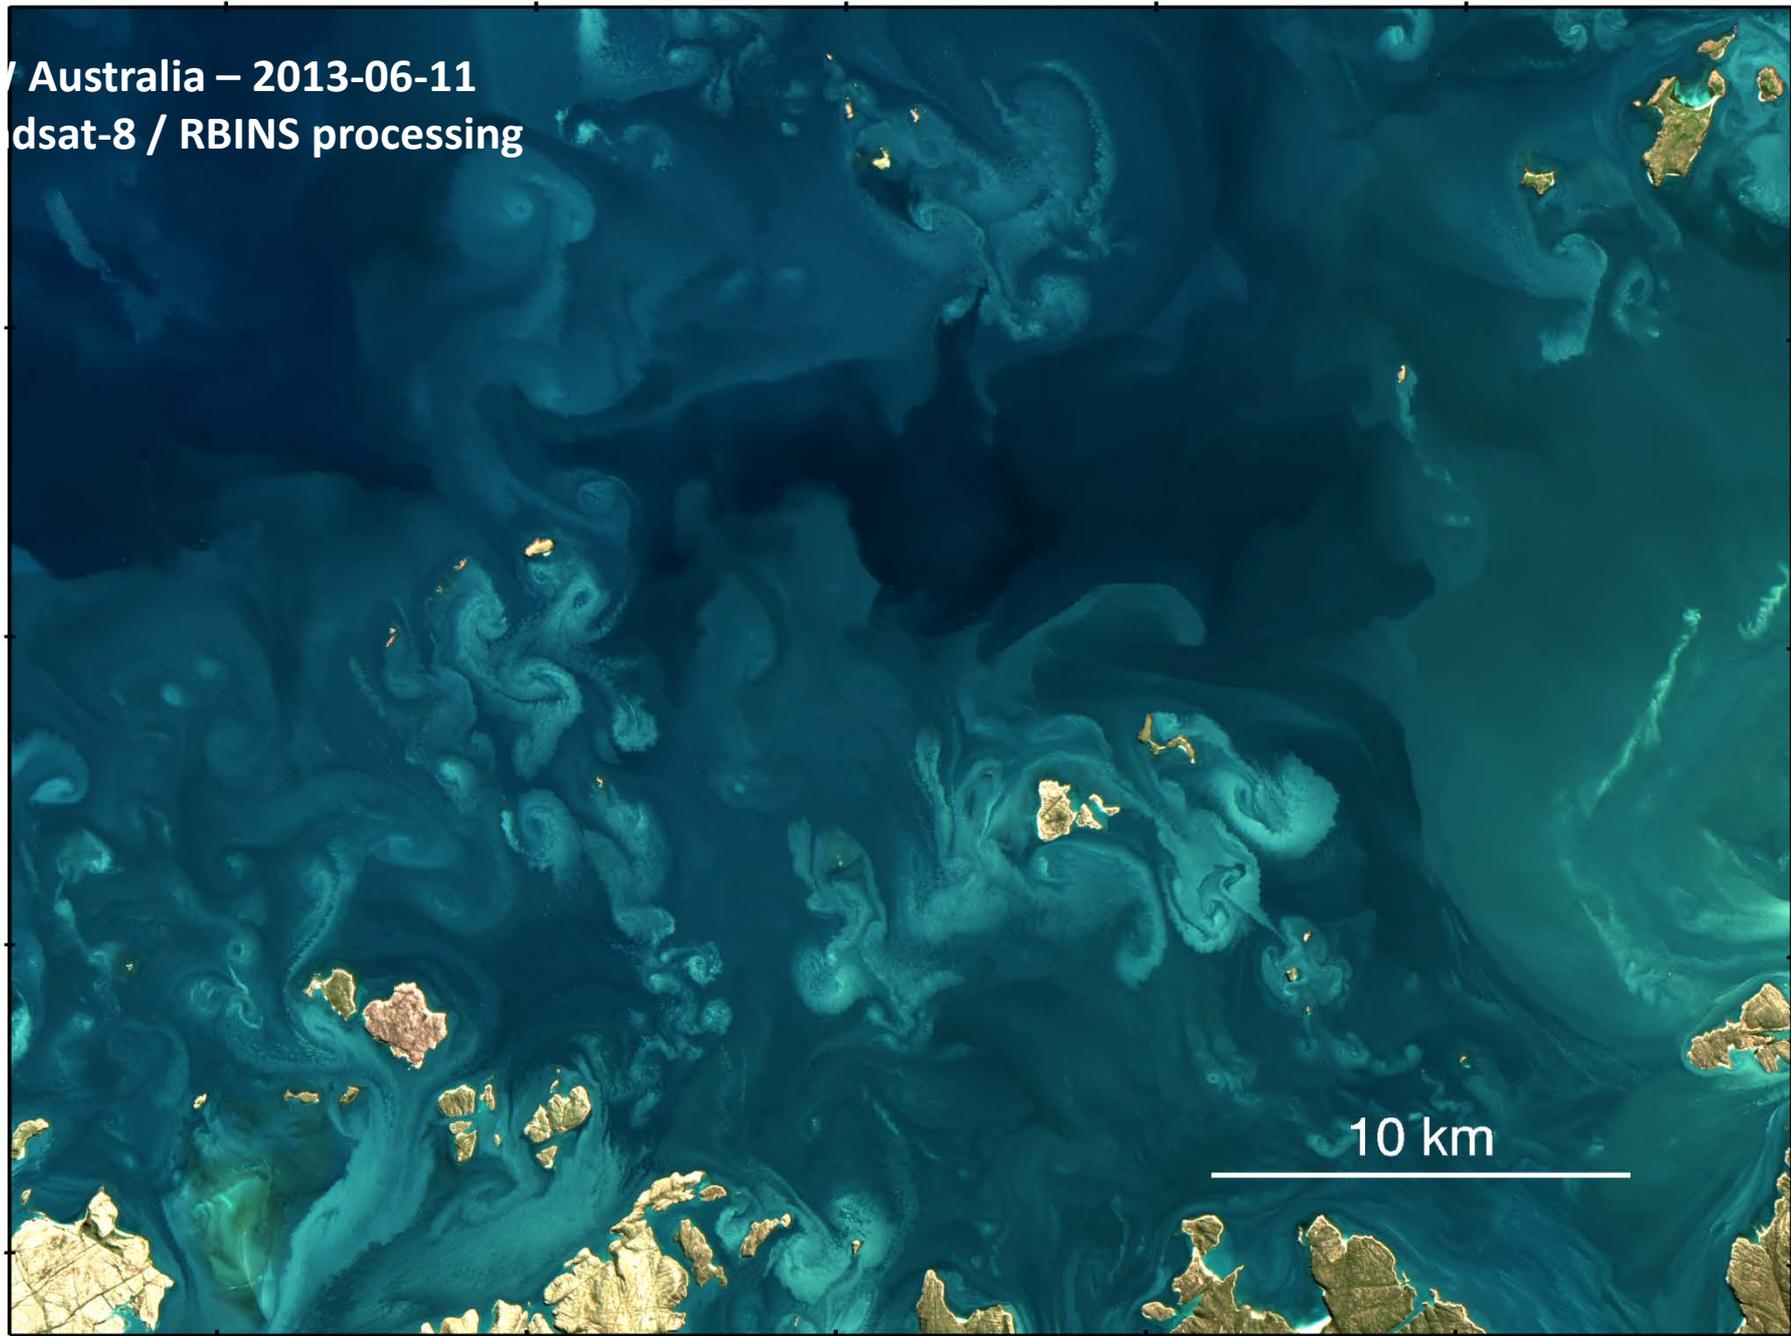

Spatial Resolution => Spectral Contrast

[Van Mol B., Ruddick K., Astoreca R., Park Y. & Nechad B. (2007). Optical detection of a *Noctiluca scintillans* bloom. EARSel eProceedings, 6, 130–137]

Australia – 2013-06-11
Satellite / RBINS processing

15°4'S
15°8'S
15°12'S
15°16'S

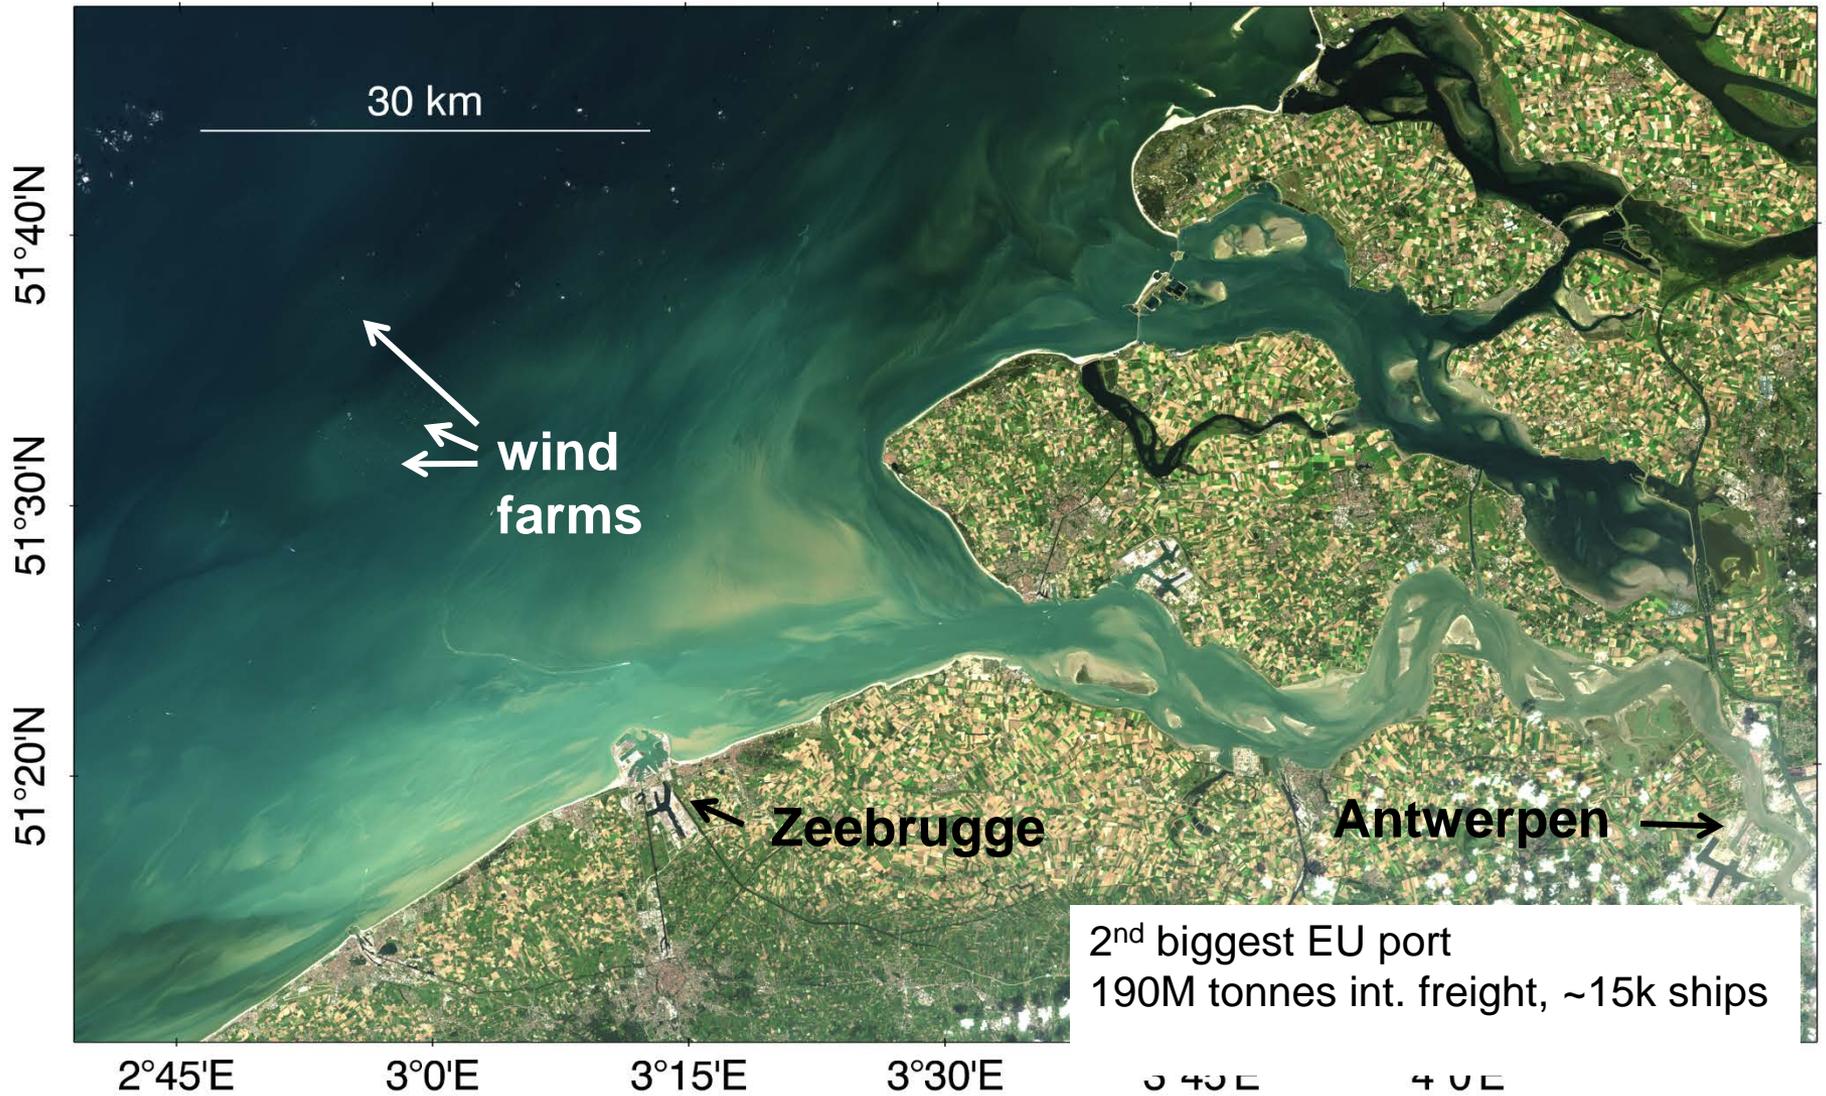

124°28'E 124°32'E 124°36'E 124°40'E 124°44'E

Alaska – 2014-09-06

Landsat-8 / RBINS processing

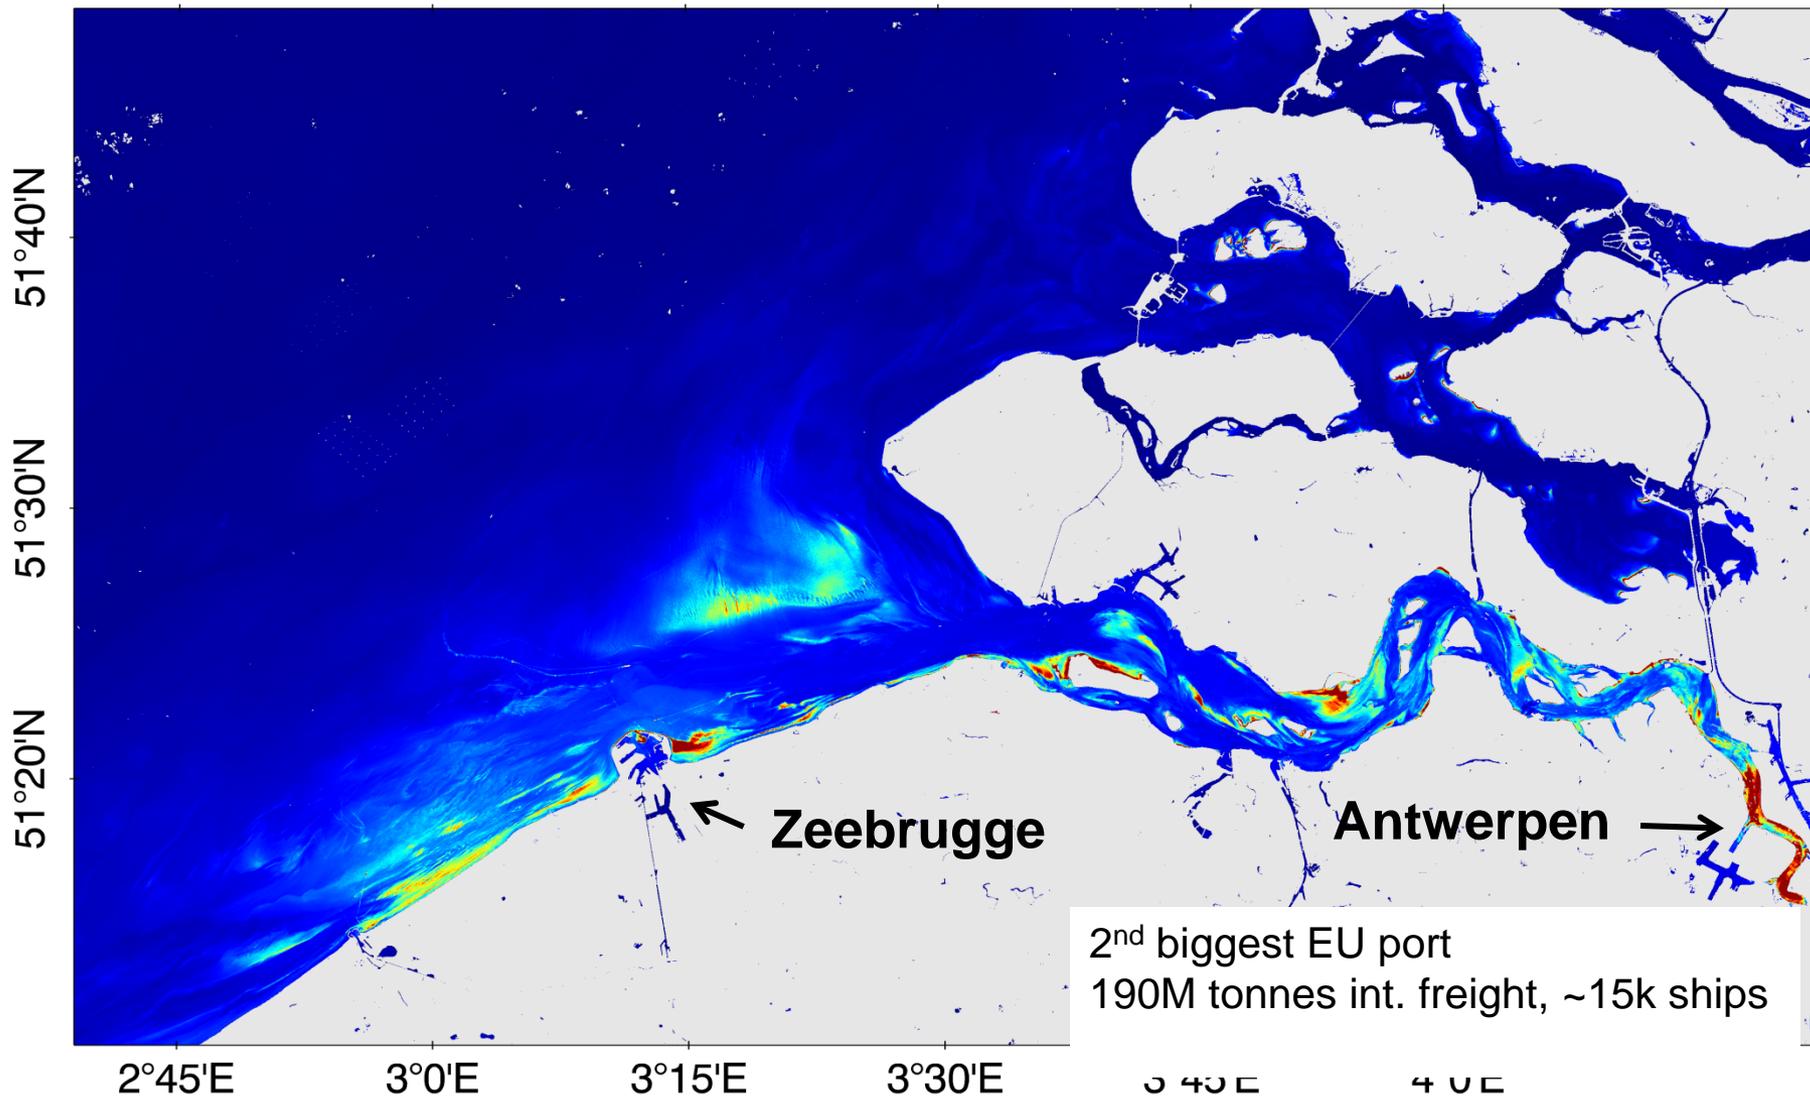

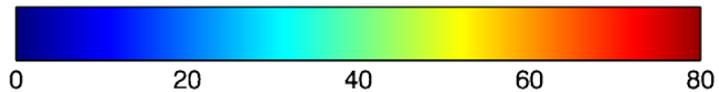

Belgian/Dutch coastal zone and Western Scheldt Estuary

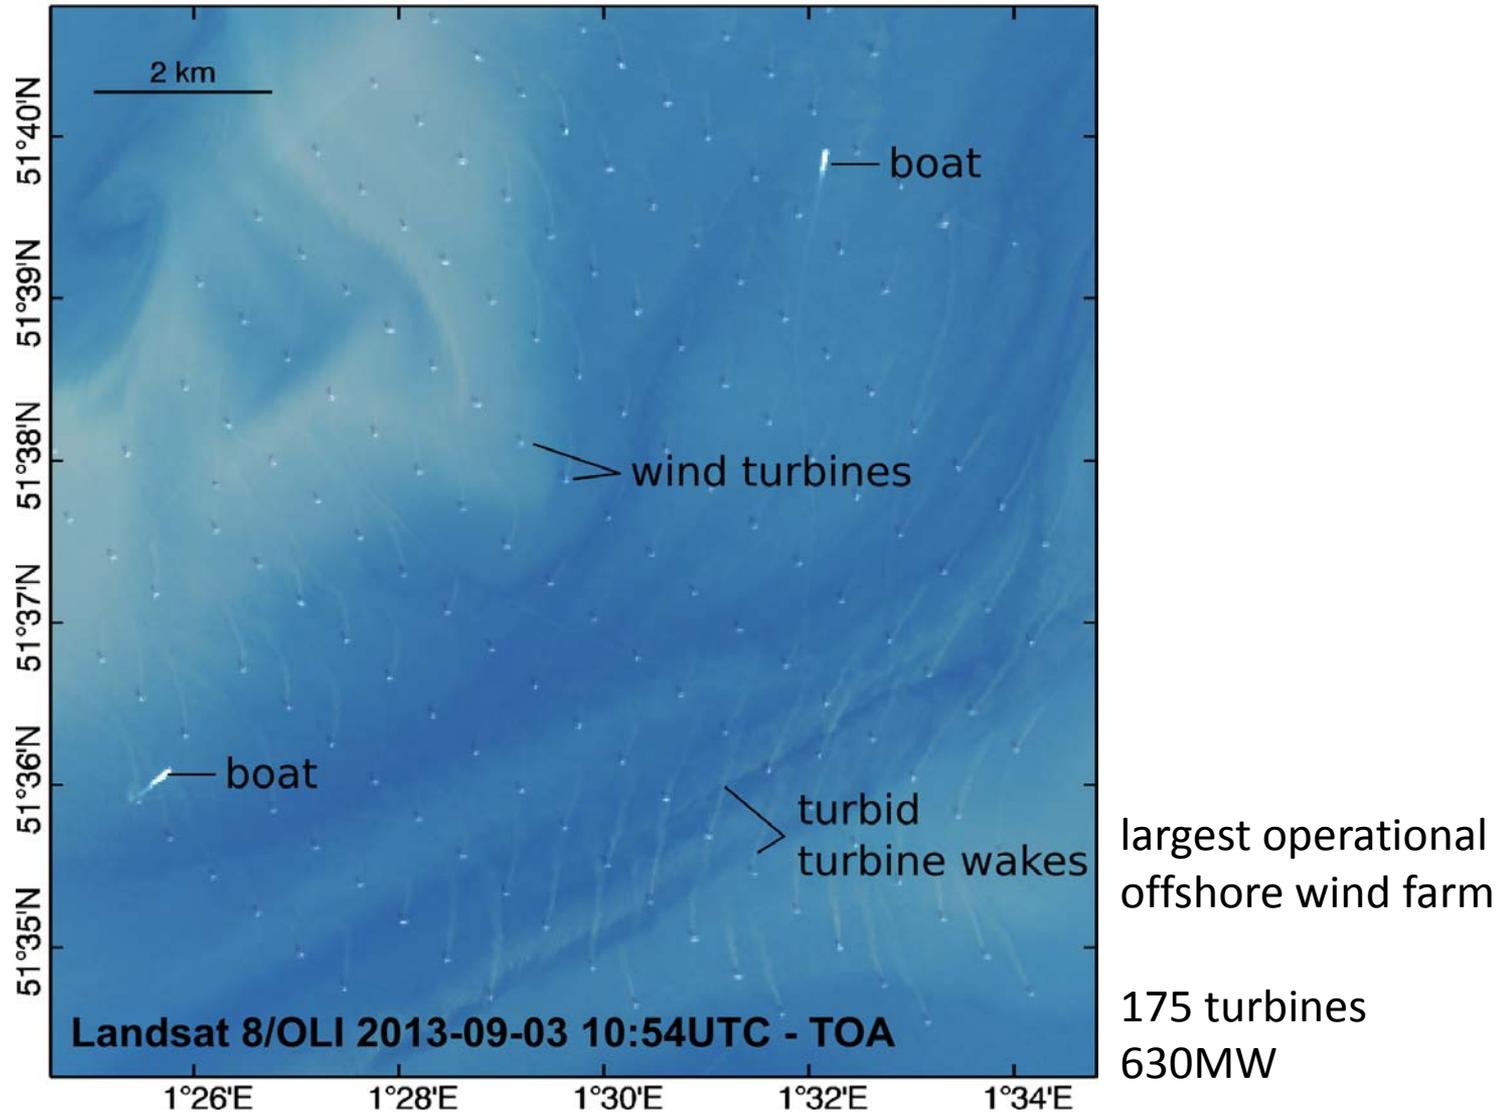

Landsat-8/OLI Rayleigh corrected RGB 2014-09-08

Turbidity (FNU)

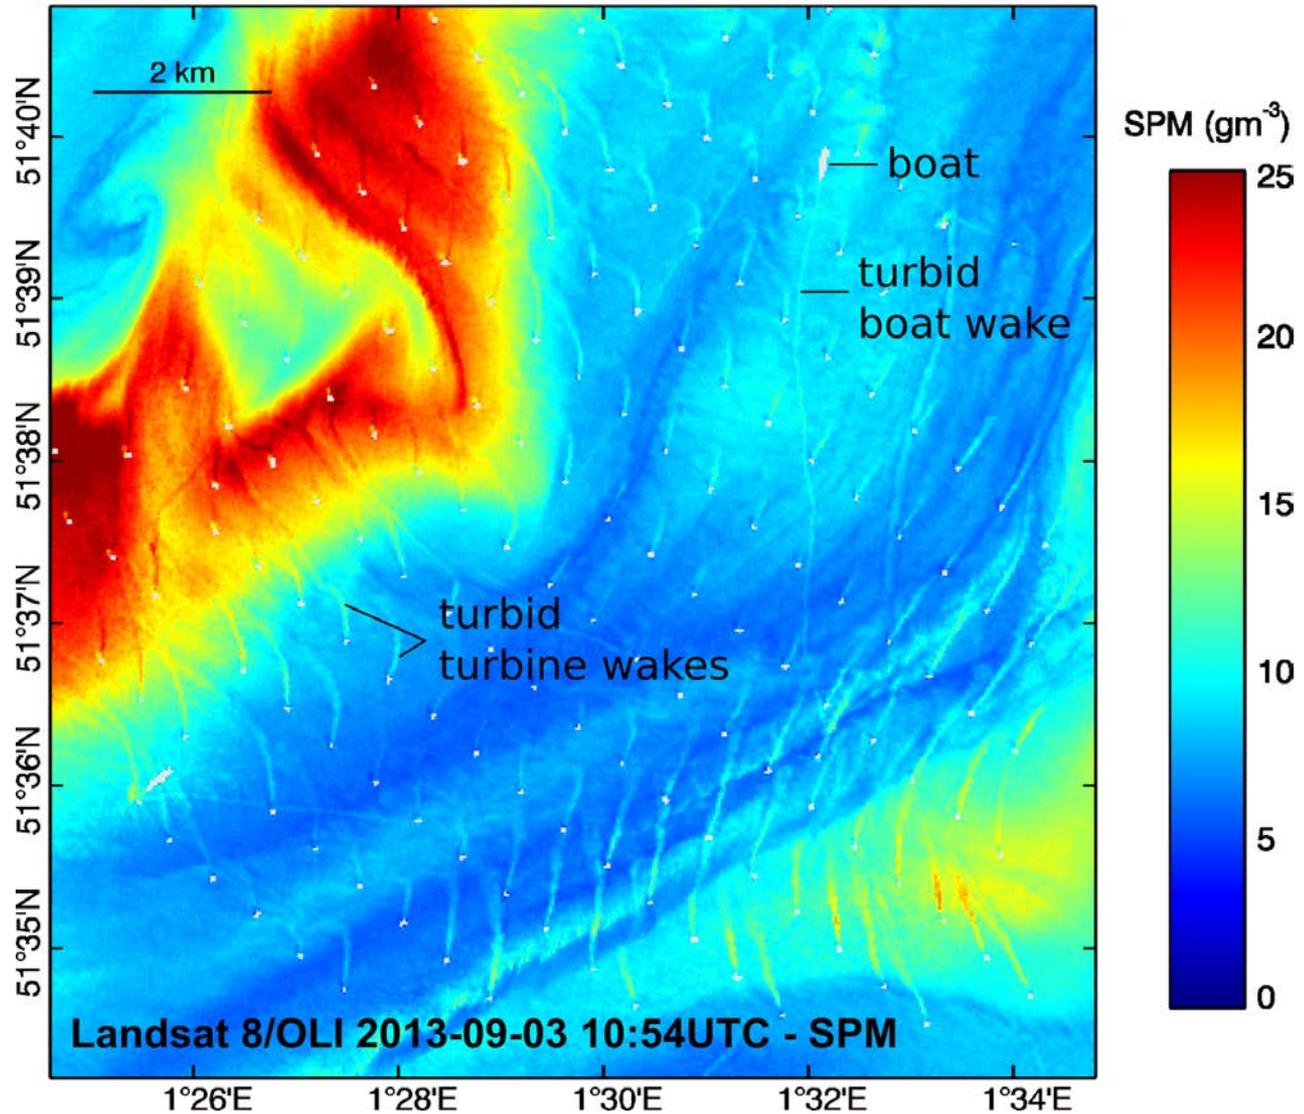

Landsat-8/OLI Turbidity (V2015+D2015) 2014-09-08

London Array offshore wind farm

Vanhellemont, Q., Ruddick, K., 2014a. **Turbid wakes associated with offshore wind turbines observed with Landsat 8**. *Remote Sens. Environ.* 145, 105–115.

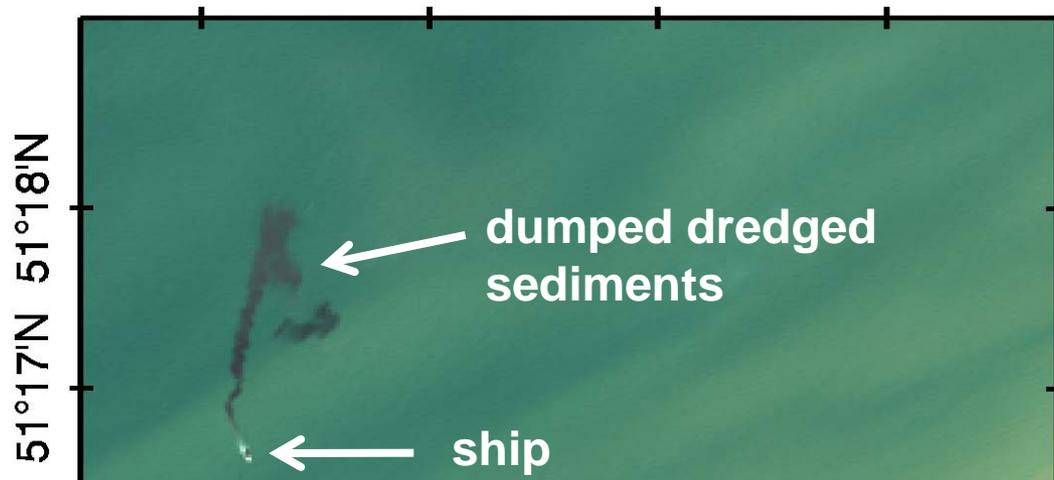

OLI-derived suspended particulate matter (SPM)

Vanhellemont, Q., Ruddick, K., 2014a. **Turbid wakes associated with offshore wind turbines observed with Landsat 8.** *Remote Sens. Environ.* 145, 105–115.

Landsat-8/OLI 2013-10-30

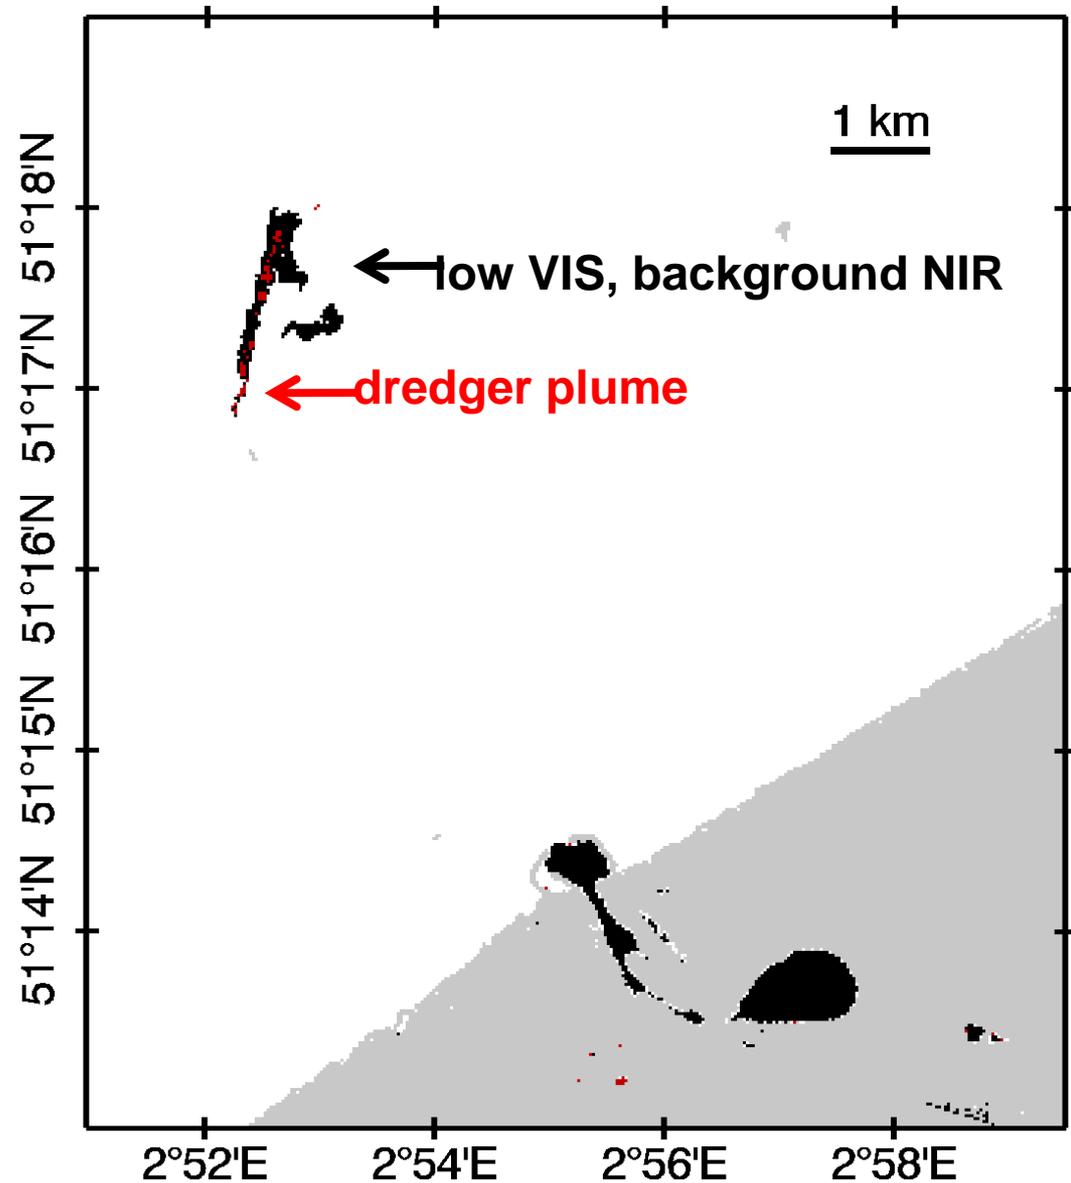

Rayleigh corrected RGB

Vanhellemont, Q., Ruddick, K., 2014b. **Landsat-8 as a Precursor to Sentinel-2: Observations of Human Impacts in Coastal Waters.**, in: ESA Special Publication SP-726.

Landsat-8/OLI 2013-10-30

NEW black sediments
flag algorithm

Vanhellemont, Q., Ruddick, K., (2015a). **Advantages of high quality SWIR bands for ocean colour processing: examples from Landsat-8.** <http://dx.doi.org/10.1016/j.rse.2015.02.007>

Pléiades very high resolution (2.8 m MS, 0.7 PAN)

www.deme-group.com

Zeebrugge – dredger (PANs)
Pléiades 2014-09-08 – RBINS processing

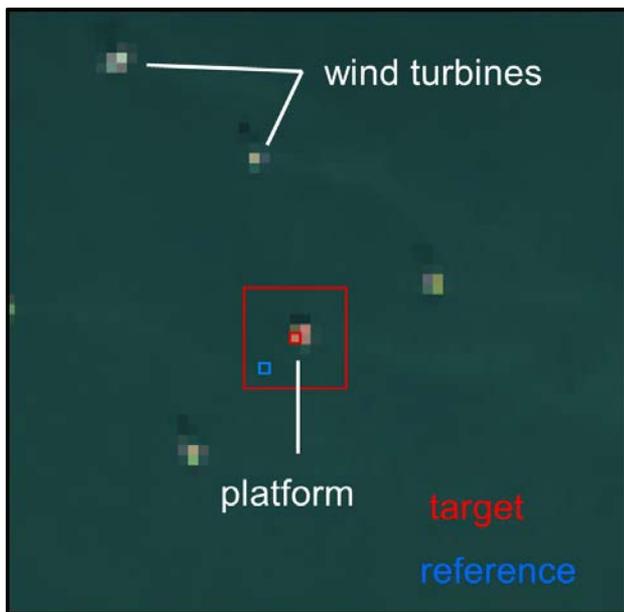

C-Power Offshore Transformer Station (PANs)
Pléiades 2015-04-14 / RBINS processing

Sub-pixel scale variability
and platform effects

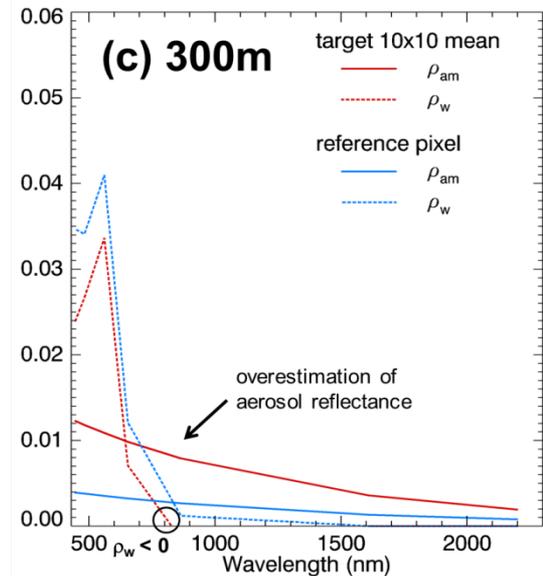

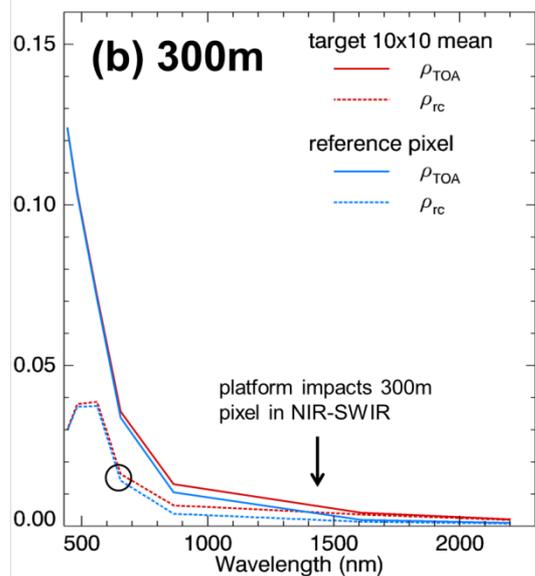

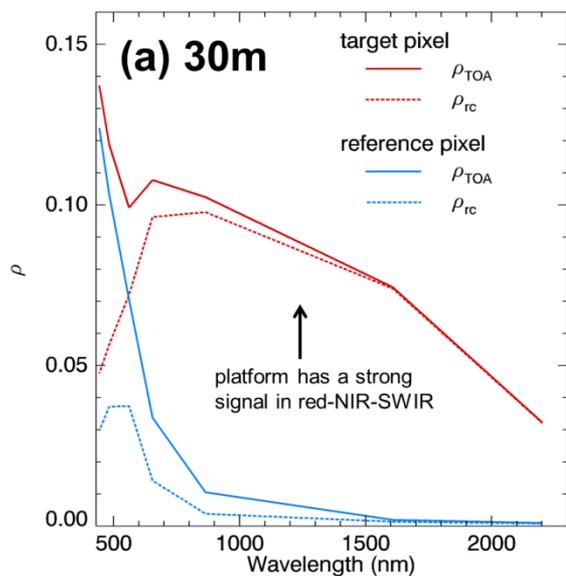

Aeronet-OC

Platform impact on moderate resolution (MODIS/MERIS/OLCI) pixel

Landsat-8/OLI data

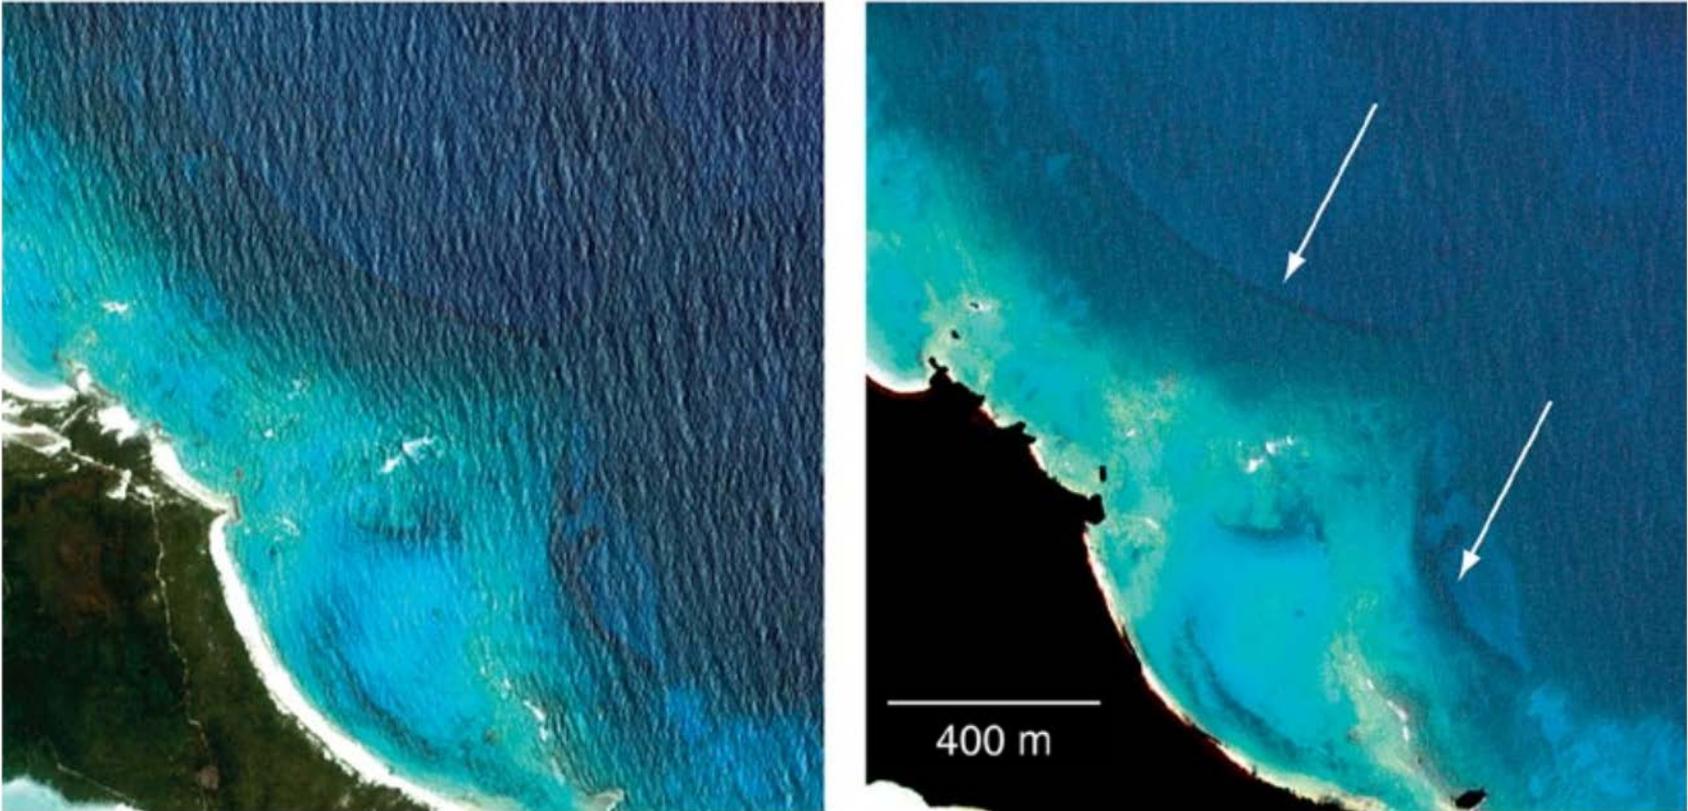

Spatially resolved sun and sky glint, wave facets

Courtesy Antoine Mangin

Glint features due to surface waves

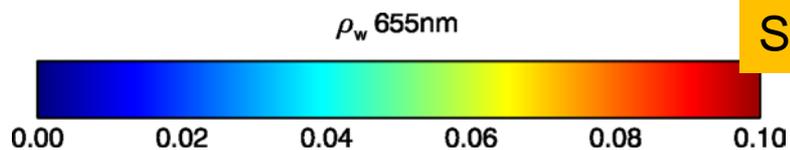

From Hochberg et al. (2003, IEEE TGRS)

IKONOS image showing sky glint patterns due to surface waves

Pan-sharpening for marine applications

(Not just High Res, also
MODIS-250, VIIRS-I,
SEVIRI-HRV)

(a) 30 m

1 km

ship

(b) 15 m sharpened

surface gravity waves

sharper features

New users, features, applications

Human impacts are more evident at higher resolution:

Sediment transport – ports, offshore constructions, dredging/dumping

... Environmental Impact Studies

Inland waters, estuaries, ports are often small

Better spectral contrast for patchy distributions (Algae, Sargassum , corals...)

Support for medium res OC (sub pixel variability, platform effects)

Measurement of sunglint and skyglint ... improved med res algos?

Challenges for HR data processing

- using chiefly land missions for water applications
 - low **spectral resolution**, broad bands (need to adapt our OC algos?)
 - low **SNR** – (need spatial binning eg for SWIR?)
 - use of **panchromatic /broad bands** for marine applications?
- **low temporal revisit**
 - many features at small spatial scale have small temporal scales
 - calibration and validation challenges

Need improved Algorithms for

Sun glint correction

sky glint correction

cloud shadowing

adjacency (bright target may be outside image!)

Can we influence future (land) missions?
Extra bands? (L9, L10, S2E/F ...?)

Need good georeferencing (automated!)

Per pixel processing ... **full image processing**

cloud shadow masking

adjacency land/cloud

estimate aerosol parameters from larger region (macropixel/tile?) than pixel
