

Application of Geostationary Satellite Images to the monitoring of dynamic variations

Jong-Kuk Choi, Young Je Park and Joo-Hyung Ryu

Korea Institute of Ocean Science & Technology

- ❖ **GOCI Products (by GDPS)**
- ❖ **GOCI Applications (Dynamic variability)**

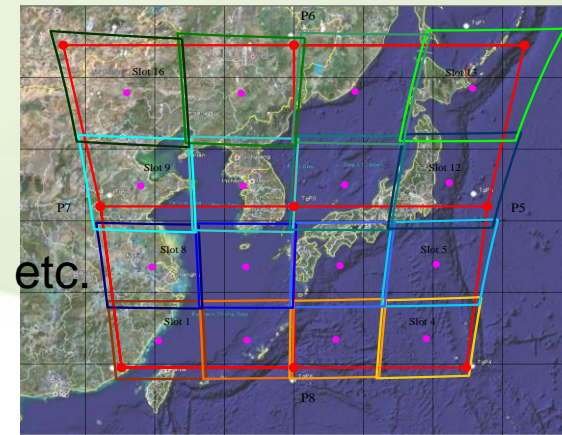

Technical Specification of GOCI

■ GOCI

- GSD(Ground Sampling Distance) : 500m * 500m
- Target Area : 2,500km * 2,500km (Center : 130°E 36°N)
- Included Nations : Korea, China, Taiwan, Japan, Russia, etc.
- Temporal Resolution : 1hour (8 times at 1 day)

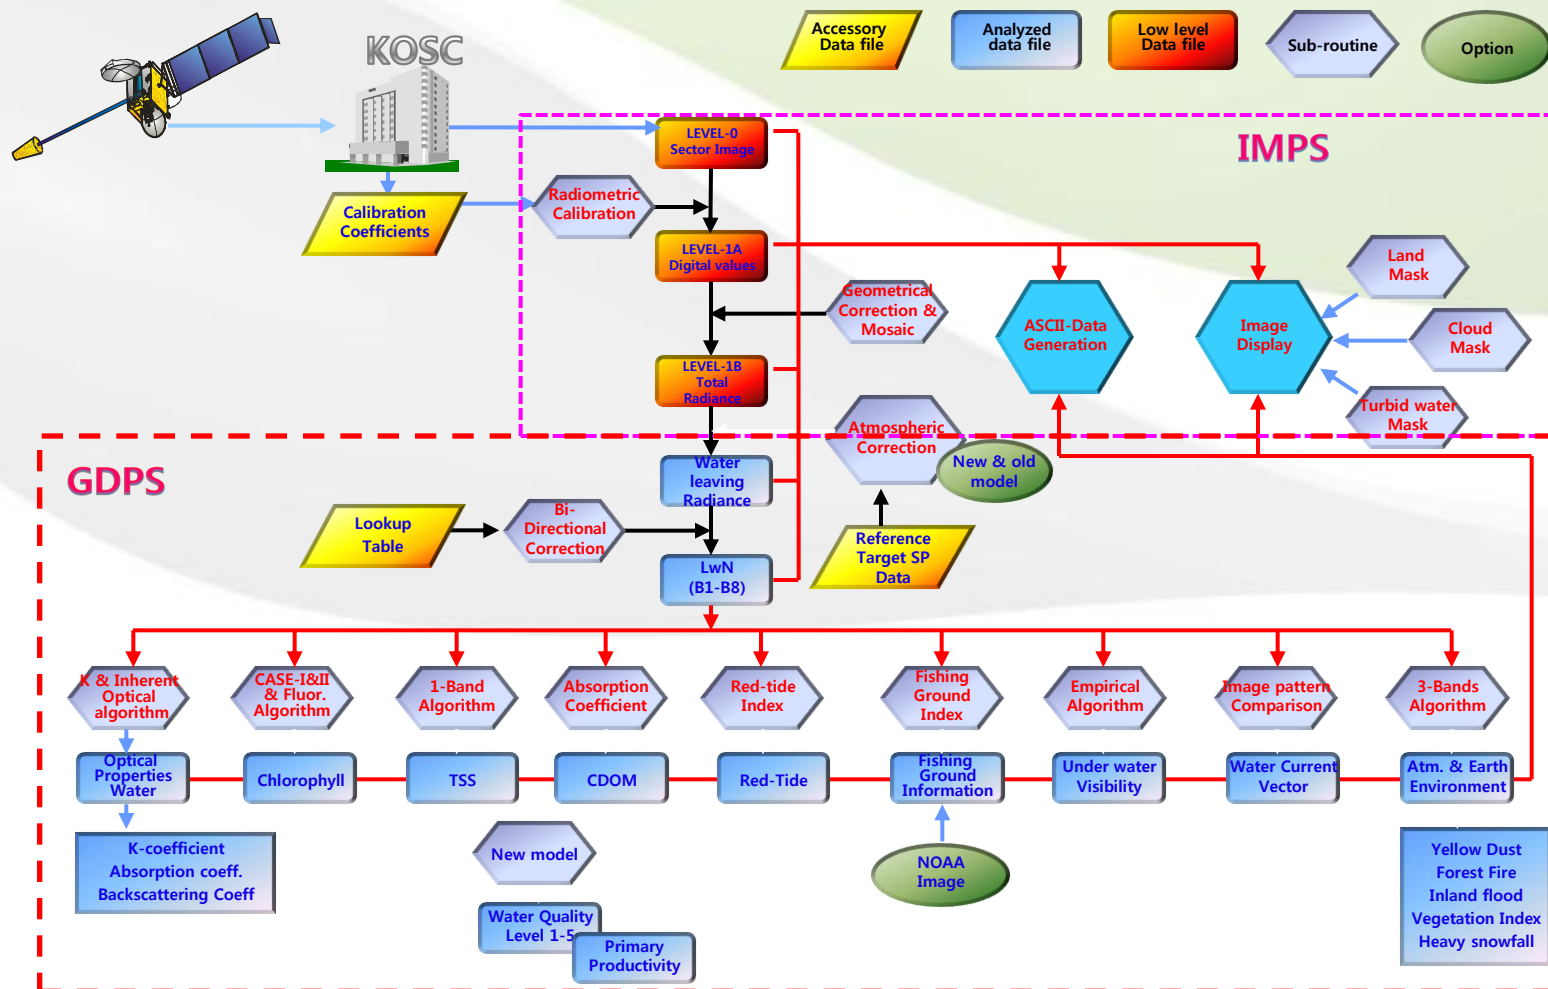

Target Area

Spectral Bands Characteristic and Requirements of GOCI

Band	Central wavelengths	Band Width	SNR	Type	Primary Application
B1	412 nm	20 nm	1,000	Visible	Yellow substance and turbidity
B2	443 nm	20 nm	1,090	Visible	Chlorophyll absorption maximum
B3	490 nm	20 nm	1,170	Visible	Chlorophyll and other pigments
B4	555 nm	20 nm	1,070	Visible	Turbidity, suspended sediment
B5	660 nm	20 nm	1,010	Visible	Baseline of fluorescence signal, Chlorophyll, suspended sediment
B6	680 nm	10 nm	870	Visible	Atmospheric correction and fluorescence signal
B7	745 nm	20 nm	860	NIR	Atmospheric correction and baseline of fluorescence signal
B8	865 nm	40 nm	750	NIR	Aerosol optical thickness, vegetation, water vapor reference over the ocean

GOCI Data Processing System (GDPS)

(The world's first!) Geostationary ocean color satellite : Design for Ocean Mission
 (The world's first!) Development and distribution of Exclusive S/W for GOCI
 and 3rd public S/W for satellite data processing (included polar orbit satellite)

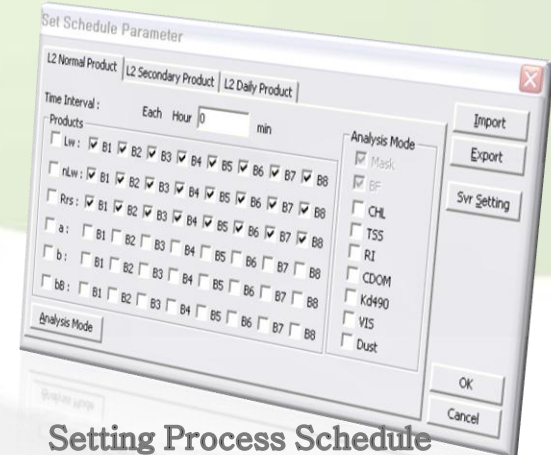

PRODUCTS	DESCRIPTION	APPLICATION
Water-leaving radiance	The radiance assumed to be measured at the very surface of the water under the atmosphere	Indispensible for water color analysis algorithms
Normalized water leaving radiance	The water leaving radiance assumed to be measured at nadir, as if there was no atmosphere with the Sun at zenith	Input data for the water analysis algorithm
Optical properties of water	K-coefficient Absorption coefficient Backscattering coefficient	Ocean optical properties analysis
Chlorophyll	Concentration of phytoplankton chlorophyll in ocean water	Ocean primary production estimation, dumping site monitoring, climate change monitoring
TSS	Total suspended sediment concentration in ocean water	Coastal ocean environmental analysis and monitoring TSS movement and transfer monitoring
CDOM	Colored dissolved organic matter concentration in ocean water	Indicator of ocean pollution Ocean salinity estimation
Red tide	Red tide index information	Ocean pollution and ecological monitoring Movement and transfer monitoring of red tide
Fishing ground information	Fishing ground probability index, fishing ground prediction	Fishing ground detection Fishing ground environmental information
Underwater visibility	Degree of clarity of the ocean observed by the naked eye	Navy tactics, ocean pollution map, sea rescue work
Sea surface current vector	Sea surface current direction/speed	Understanding of sea surface currents and estimation of pollutant movements
Atm. & earth environment	Yellow dust, Vegetation Index	Atmospheric environment and land application
Water quality level	Coastal water quality level estimation	Coastal ocean eutrophication Coastal water quality control/monitoring
Primary productivity	The production of Organic compounds from carbon dioxide, principally through the process of photosynthesis	Carbon cycle Long-term climate change monitoring

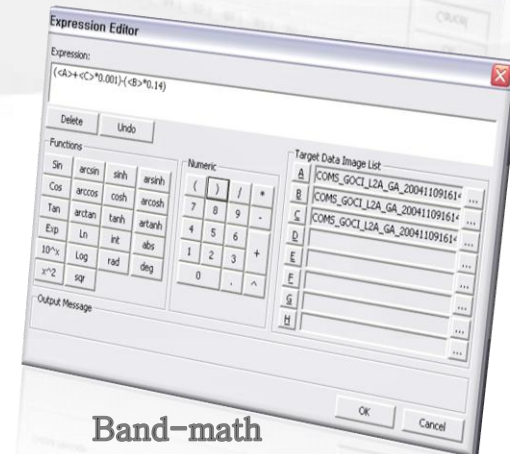

GDPS GUI

GOCI L2 Display

Setting Process Schedule

Band-math

- Level 1B
 - Radiometric & geometric corrected Total Radiance

- Level 2
 - Environmental properties derived from Ocean signal(Lw)
 - For GOCI, L2 data will be generated each hour(8 times/day)

- Level 3
 - Secondary derived data from L2 like Fishery Ground information, Primary Production.
 - Cloud-free(reduced) ocean environmental data by daily composite of L2

Time-series variations in GOCI-derived turbidity

areas of relatively high turbidity (in red) gradually decreased over time

- clear water from open sea suppressed turbidity during flood tide

around the time of high tide, turbidity was remarkably lower

- settlement of suspended particulates during the transition from flood to ebb tide and resulting lull in the tidal current

Time-series variations in GOCI-derived turbidity

2011.10.26 UTC 01:30

1 2 3

4 5 6 7 8

9

V1,4 : nearly clear water close to the open sea

- concentrations were relatively low over the entire time period from 10:30 to 14:30 and did not exhibit remarkable patterns in hourly variation in SSC

Time-series variations in GOCI-derived turbidity

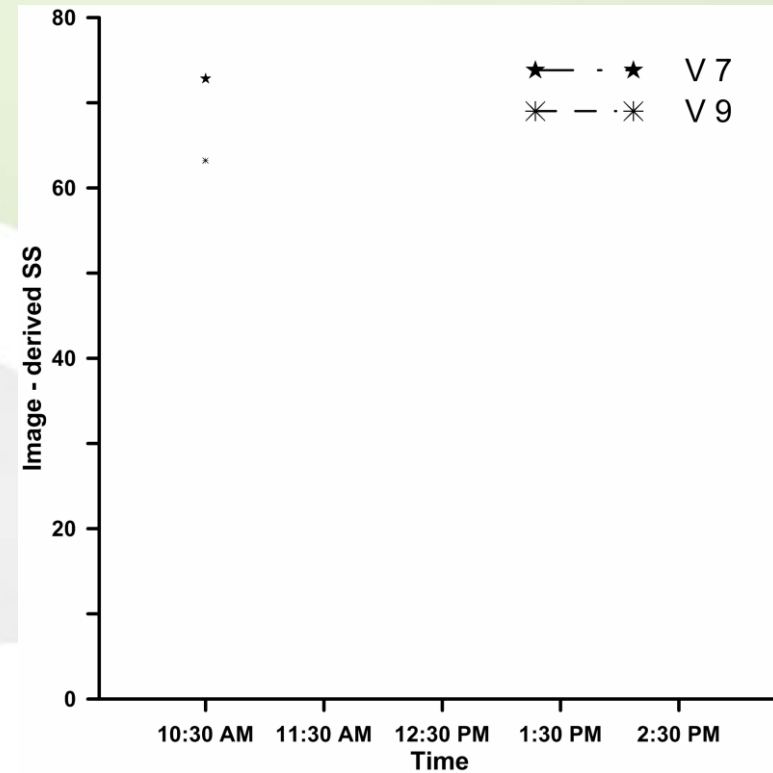

2011.10.26 UTC 01:30

1 23

4 5 6 7 8

9

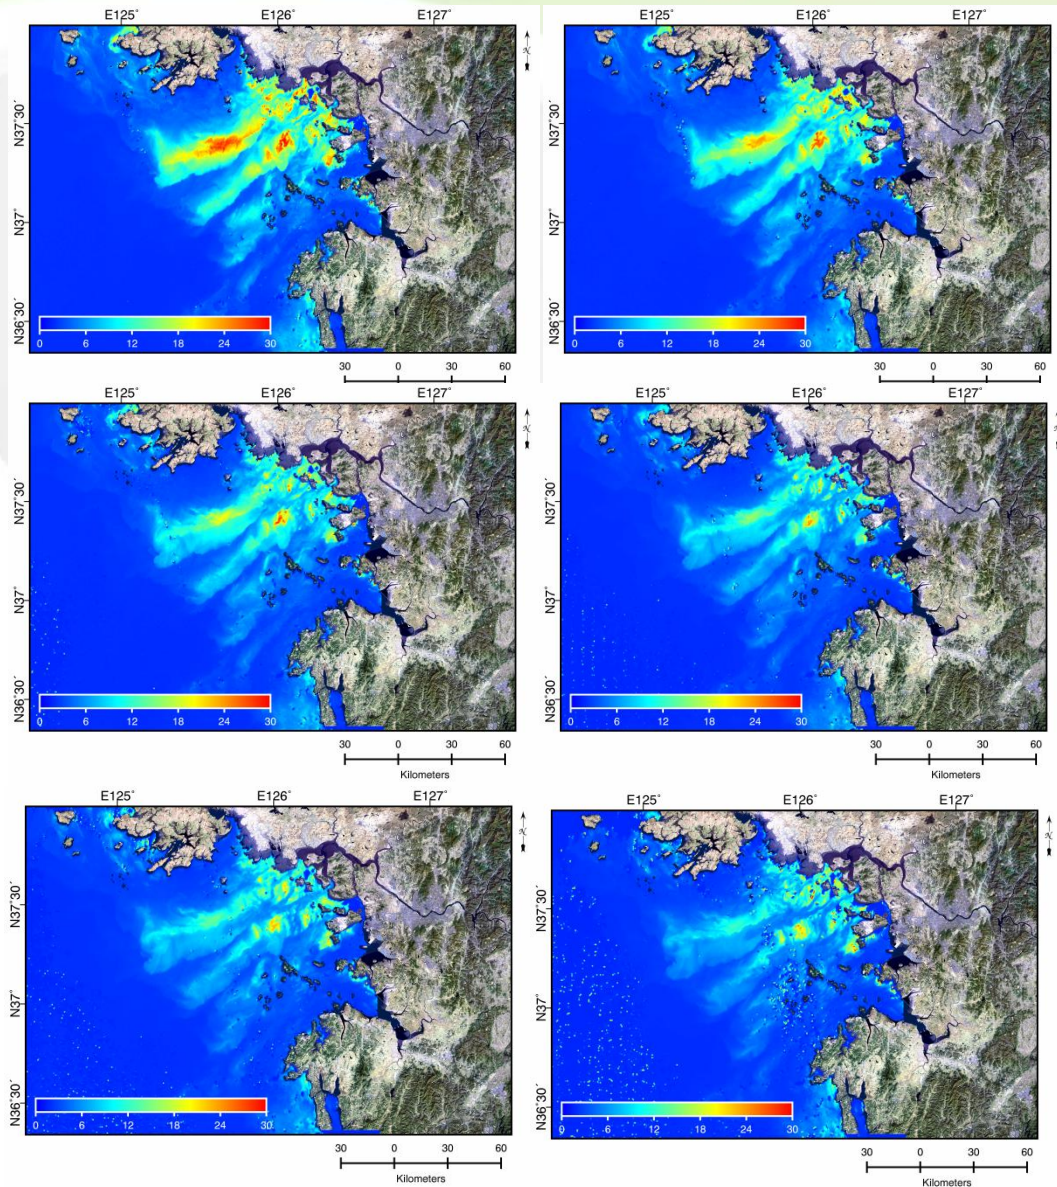

V7,8,9 : highest turbid within the coastal region

- Clear patterns of hourly decreases in turbidity

(Choi et al., 2012; JGR)

Time-series variations in GOCI-derived turbidity

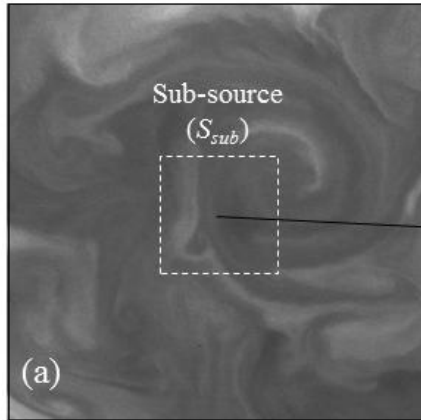

- 2012. 10. 23. 00-05 UTC

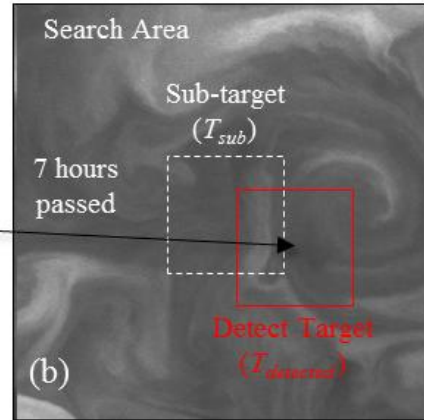

Ocean surface current

Volcanic Eruption

2011. 01. 25 UTC 02:16

- ❖ The dynamics of ocean properties, especially near the coastal region can be successfully estimated using geostationary satellite images with high frequency like GOCI
- ❖ To this end, algorithms for atmospheric correction, SSC, Chl and other parameters both in the open ocean and in high turbid water suited for GOCI with high accuracies are inevitable, which is still challenging

Thank you!!
