

# NOAA Session Discussion Questions:

- Definitions and user requirements for gap-filled data (e.g., time binning, quality, etc.)
- User requirements for IOPs (e.g., which products? spectral?/which bands?, etc.)
- Other operational\* (routine, sustained production, readily accessible) products would you like to see? (*Product needs peer-review publication as prerequisite to implementation*).

\* See DiGiacomo Keynote on Thursday for more discussion
