

Do small scales make a big difference?

Building a South African Southern Ocean Carbon - Climate research capability (the journey, direction and some science highlights)

Sandy Thomalla, Pedro Monteiro, Luke Gregor, Precious Mongwe, Hazel Little, Sarah Nicholson

SOCCO

Southern Ocean Carbon and Climate Observatory

CSIR

our future through science

T- 0

The IPY BONUS-GOODHOPE cruise: Feb - March 2008

Humble beginnings

SANAE 48: Dec 2008 – Feb 2009

SA Agulhas

Underway $p\text{CO}_2$, O_2/Ar NCP

Humble beginnings

CTD

Antique NIO bottles

Upgrade

SANAE 49: Dec 2009 – Feb 2010

CTD

UCTD

SA Agulhas II - 2012

SOCCO

Southern Ocean **Carbon** and Climate Observatory

OCEAN PROFILING (CSIR, SANAP)

- CTD, UCTD, gliders, floats

OCEAN ROBOTICS (CSIR, STS, SANAP)

- Buoyancy gliders, wave gliders, bio-optics floats

OCEAN IRON & TRACE METAL CHEMISTRY (SUN, CSIR)

- Trace metal container and land based class 100 laboratory, GEOTRACES CTD, FIA

New interdisciplinary
research facilities in
support of **SANAP** & the
Global Change Grand
Challenge

OCEAN PRODUCTIVITY (UCT)

- Variable light incubators, access to ^{15}N mass spectrometer, nutrient analyser, fluorometre, Titrimo, Coulter Counter

OCEAN BIO-OPTICS (CSIR)

- Underway IOP (ac-s, bb9, Oscar, FiRe, Multi- λ excitation fluorometre), profiling radiometre, bio-optics float, bb2fl puck on glider

OCEAN CO₂ CHEMISTRY AND GAS FLUXES (CSIR)

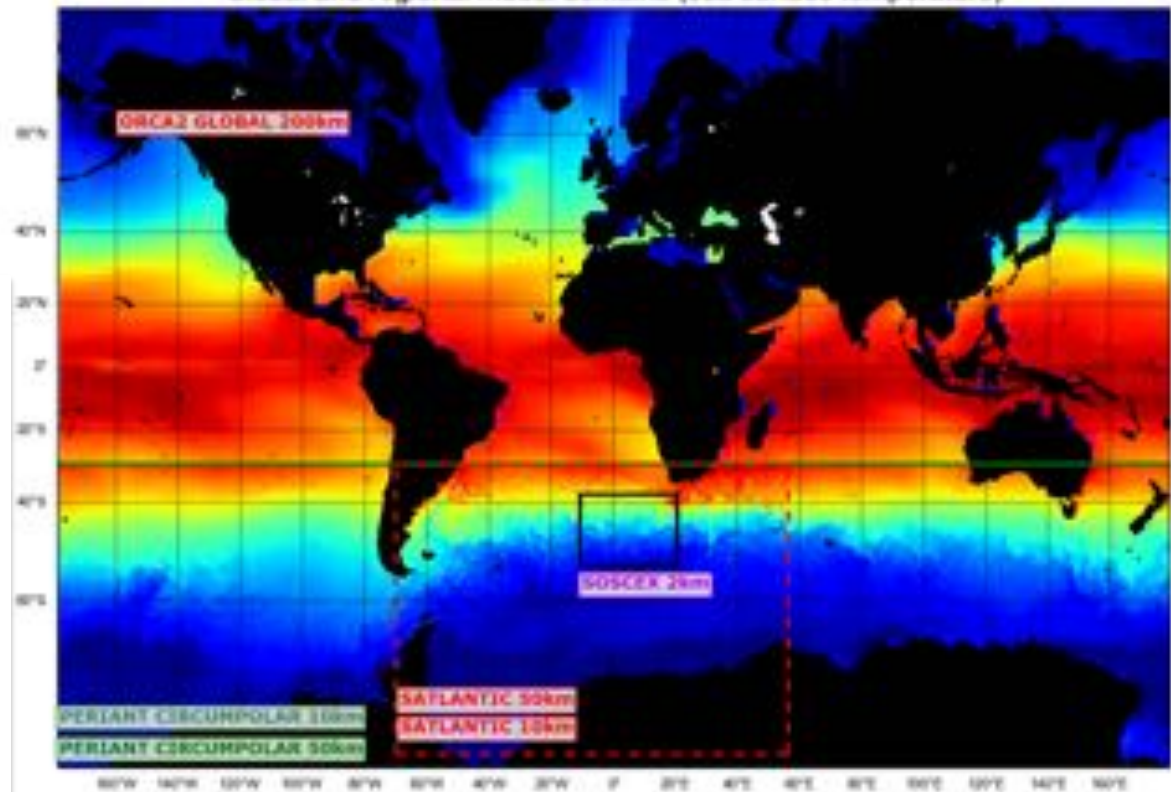

- pCO₂ wave glider, underway pCO₂, VINDTA TCO₂

Modelling

NEMO v3.4 Hierarchy of models

Ocean + Ice + PISCES BGC

Global and regional model domains (sea surface temperature)

BIOPERIANT12

Periant/ Satlantic runs: 1989 – 2008
SOSCEX runs: 2006 - 2008

Ocean robotics

SA RobOTIC

Trace metal chemistry

Bio-optics

CO₂ chemistry

SOCCO HCD

All Students (MSc + PhD + Postdoc)

Currently

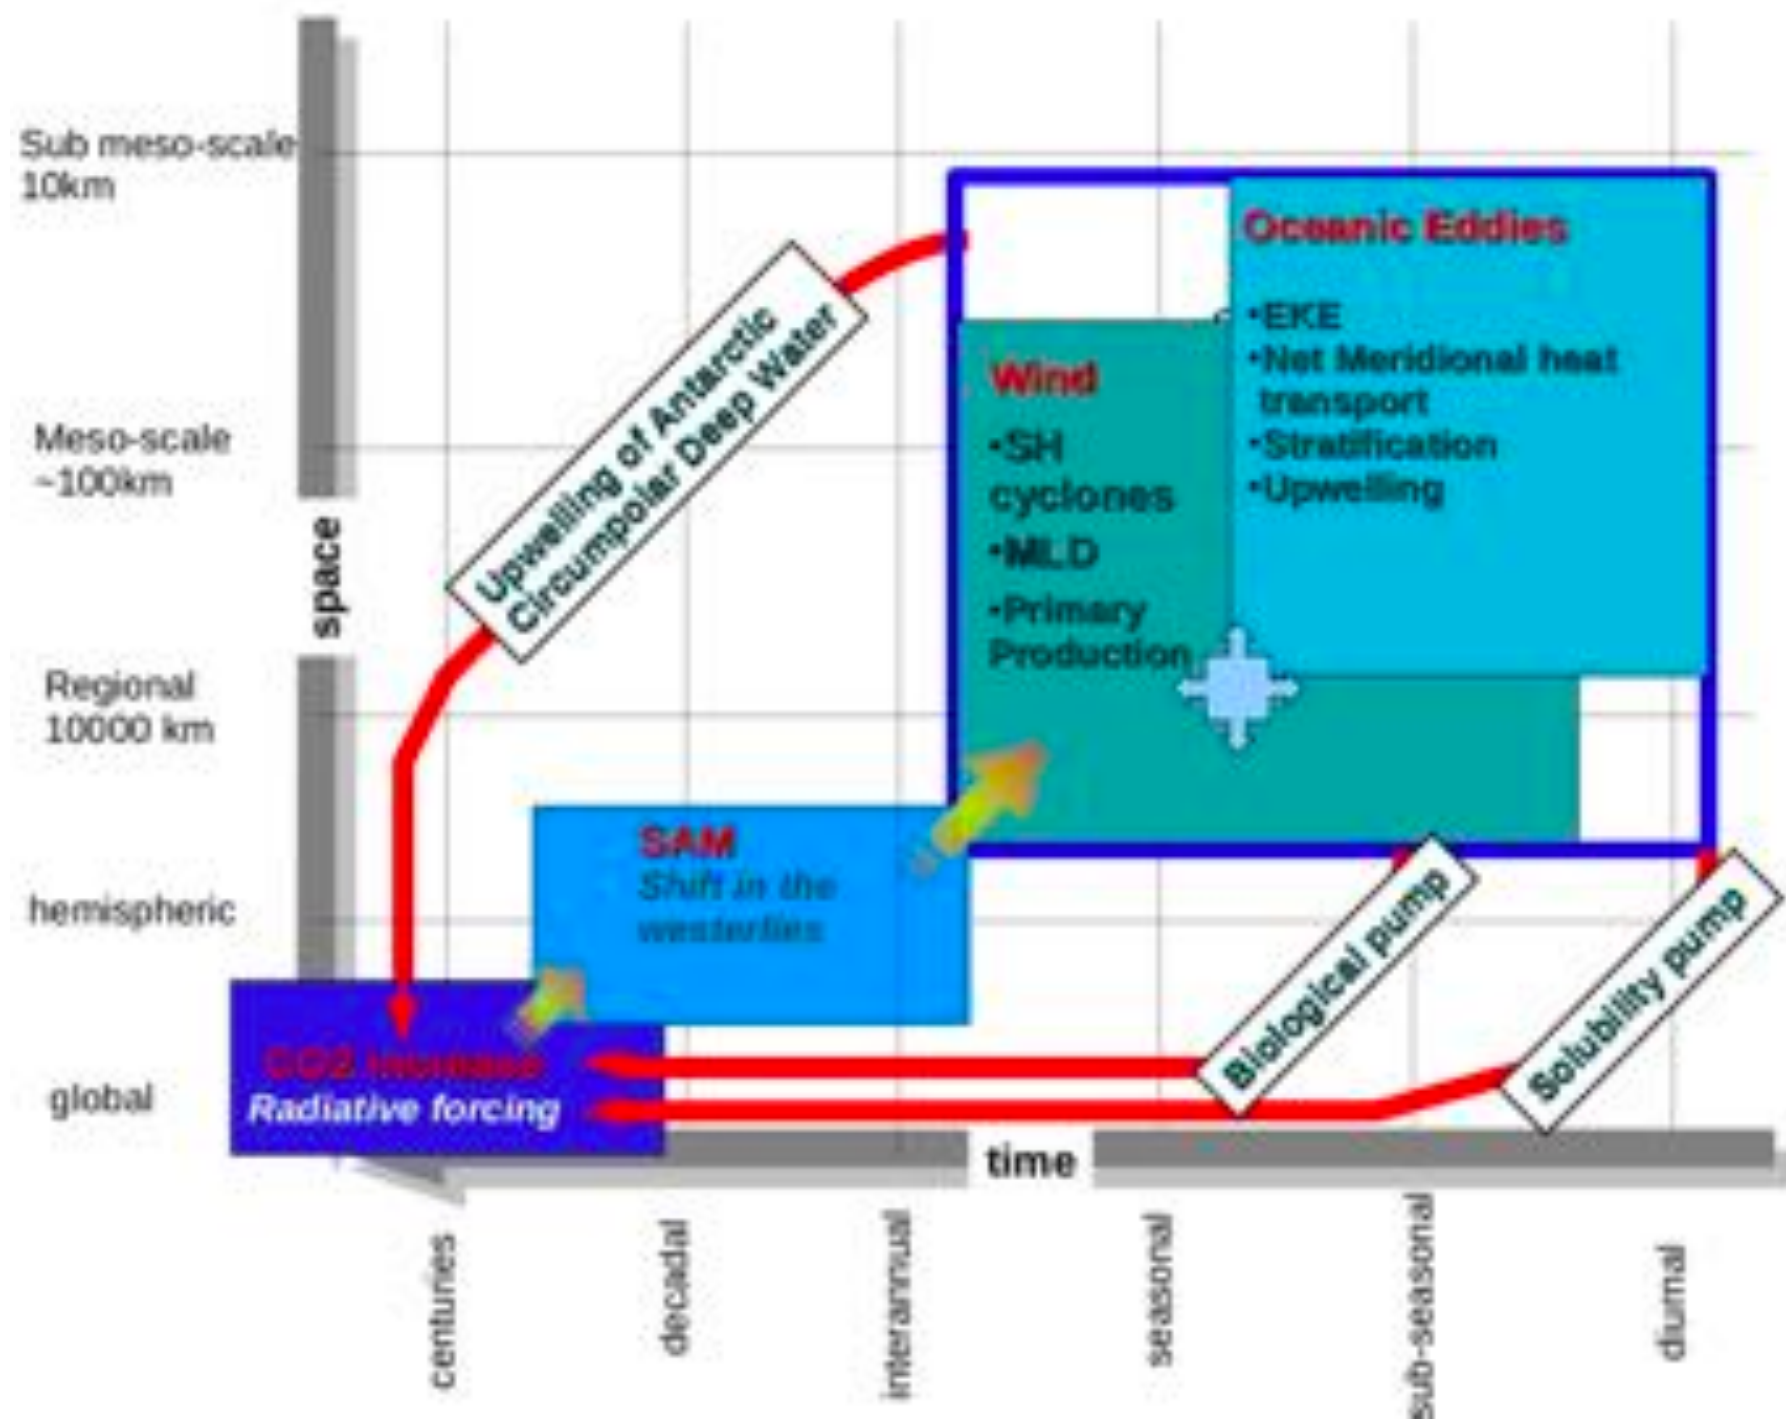

- 6 Staff members
- 17 Students

OK ... but what about our scientific journey

SOCCO Hypothesis

“Fine scale ocean dynamics are key to understanding the role of the Southern Ocean in global century-scale trends of atmospheric CO₂ and regional climate change.”

Empirical estimates of $p\text{CO}_2$ from satellite data

Gregor et al., Biogeosciences 2017

Data:

- SOCAT(v3) fCO_2
- CDIAC $\text{xCO}_2^{\text{atm}}$
- GlobColour chlorophyll
- GHRSSST
- ECCO₂: MLD, Salinity

Methods:

- Support vector regression and random forest regression

Decoupled seasonal drivers of CO₂

Gregor et al., Biogeosciences 2018

(Landschützer et al., 2015)

Decoupled seasonal drivers of CO₂

Gregor et al., Biogeosciences 2018

- Long term variability driven by winter in the PFZ (solid red line)
- Short term variability influenced by summer (dashed red line)

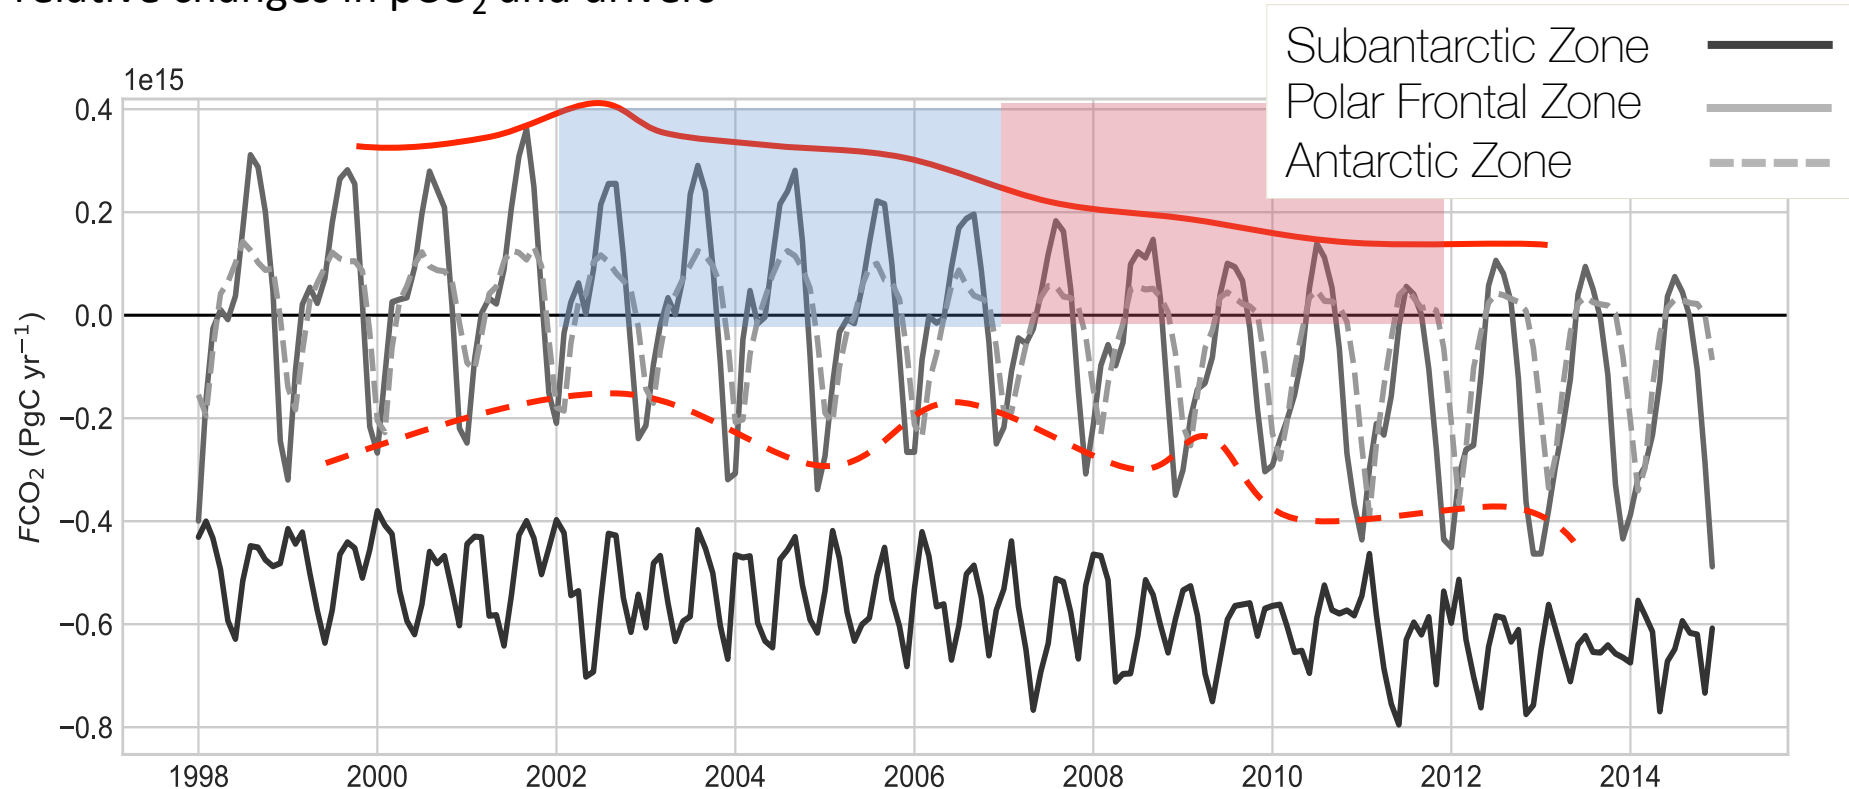

Decoupled seasonal drivers of CO₂

Gregor et al., Biogeosciences 2018

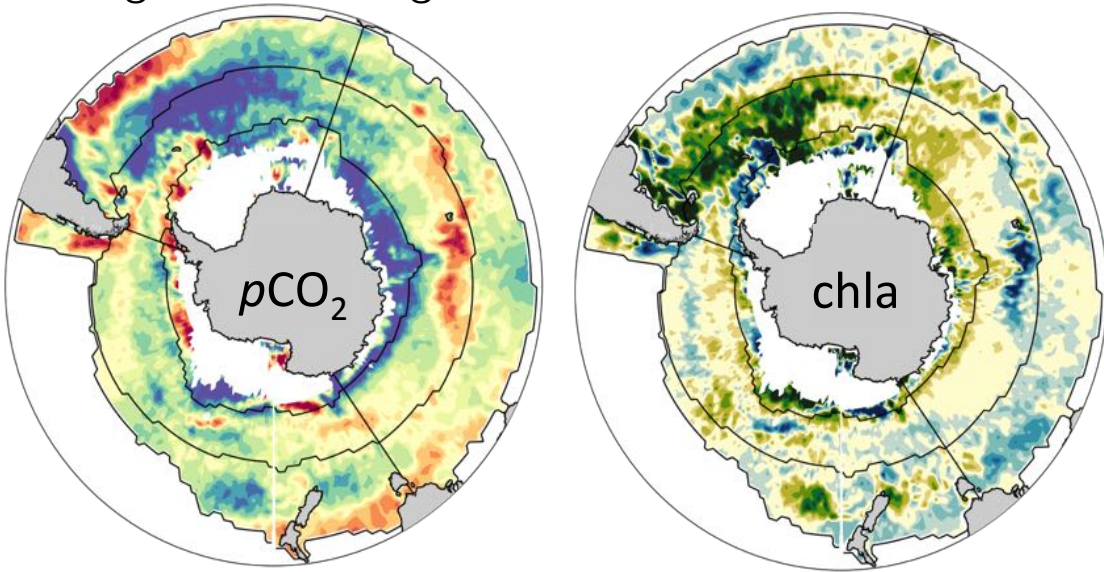

- Long term variability driven by winter in the PFZ (solid red line)
- Short term variability influenced by summer (dashed red line)

Subtract the average of two periods and the difference shows relative changes in pCO₂ and drivers

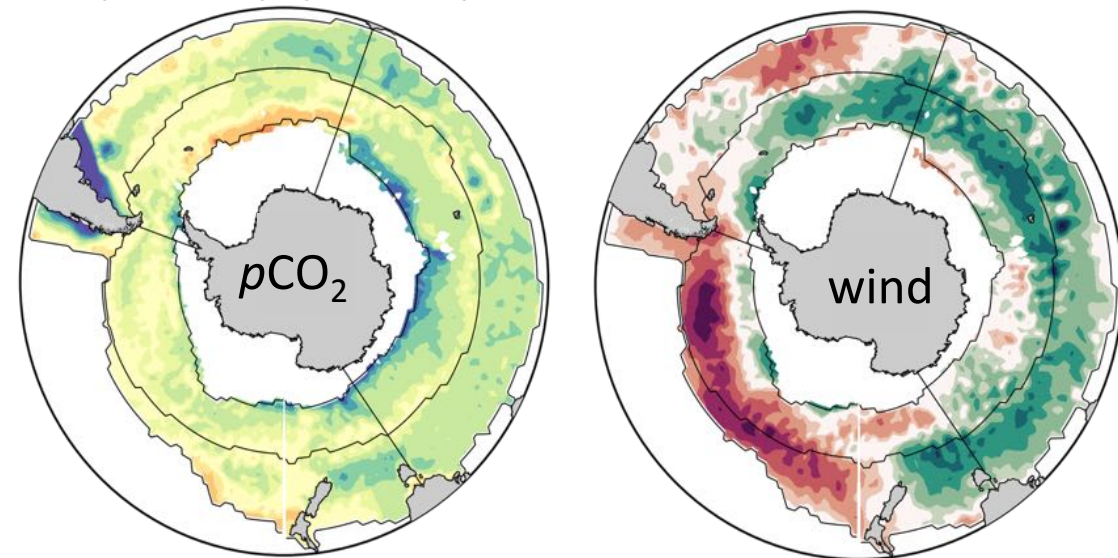

Decoupled seasonal drivers of CO₂

Gregor et al., Biogeosciences 2018

Summer
Short term anomalies
are driven by changes in
chlorophyll-a

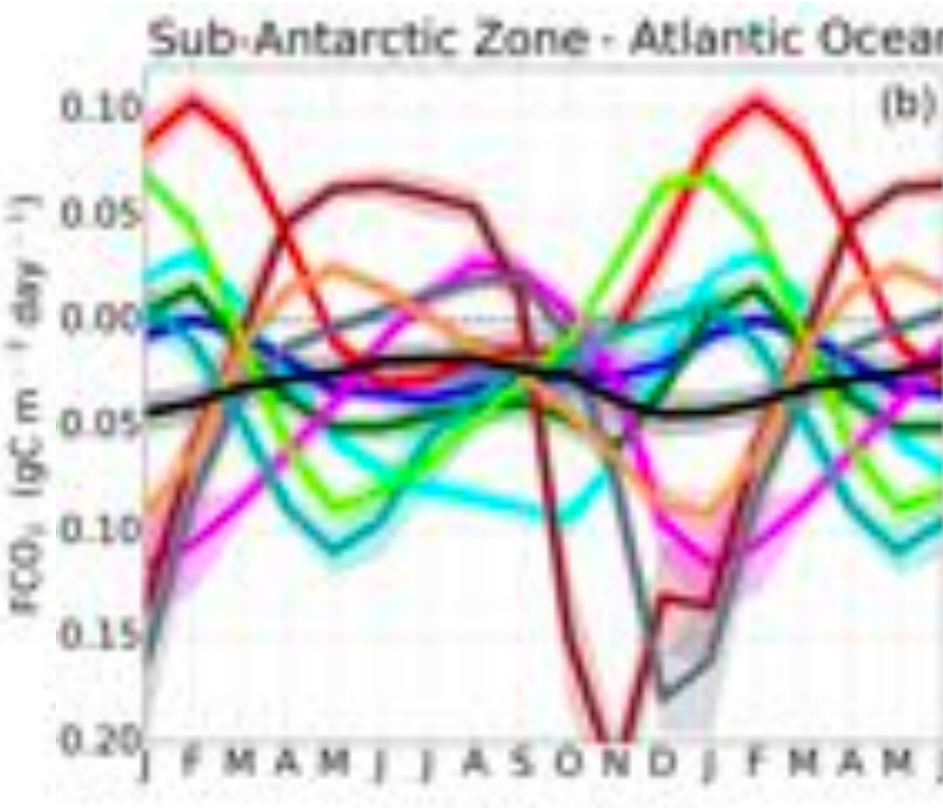

Winter
Decadal trend driven by
weaker winds (linked to
SAM)

Anomalies between two periods: (2007 : 2011) – (2002 : 2006)

The Seasonal Cycle as mode to diagnose biases in CO_2 flux in CMIP5 Models

Mongwe et al., Ocean Model, 2016; Biogeosciences, 2018

FCO_2 for 10 CMIP5 ESMs and L14 Obs

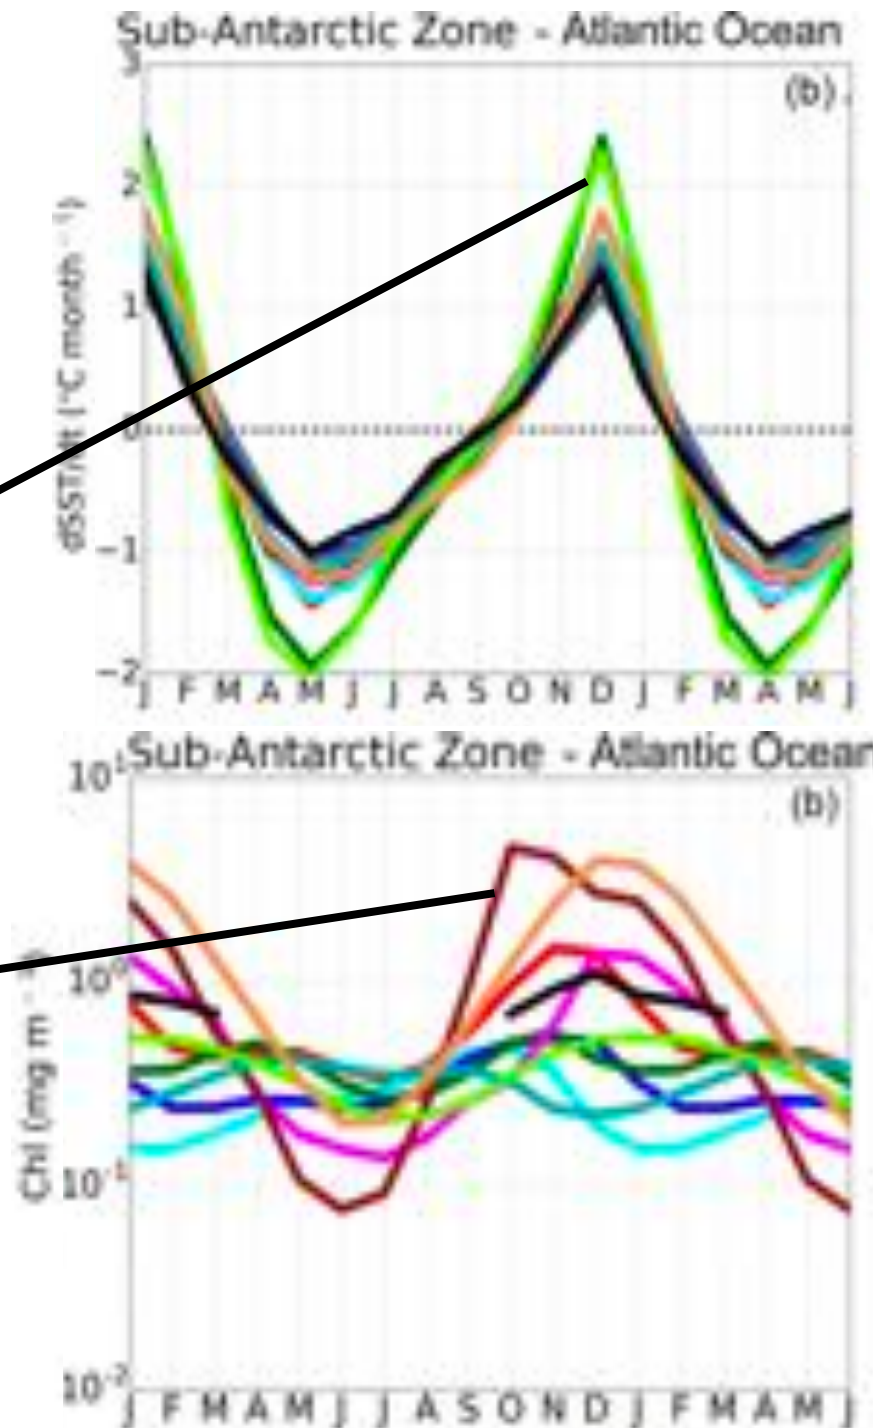

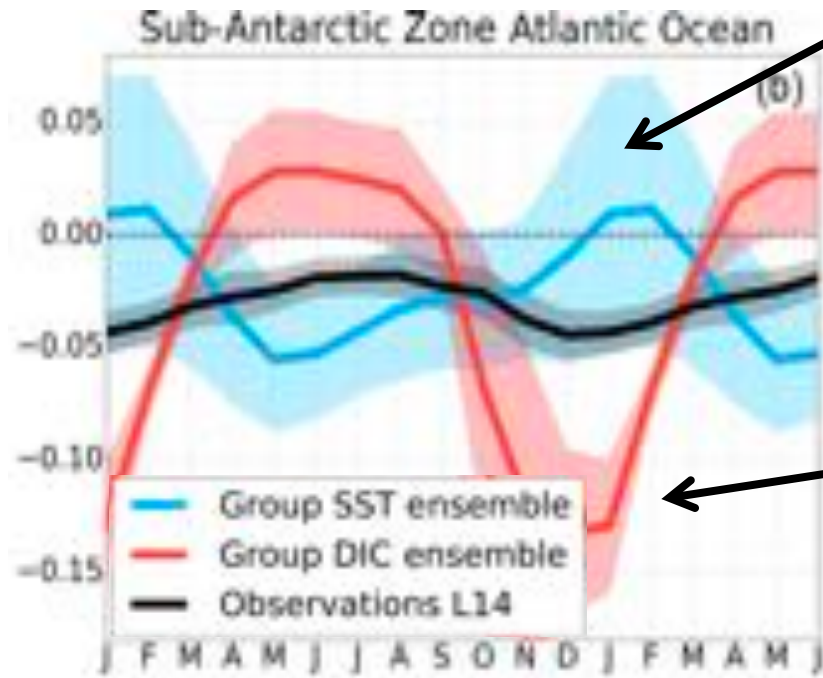

Split into two bias groups:

- SST
- DIC (phyto)

The Seasonal Cycle as mode to diagnose biases in CO₂ flux in CMIP5 Models

Mongwe et al., Biogeosciences, 2018

Characterising the Southern Ocean seasonal cycle

Thomalla et al., 2011, Biogeosciences

Mean summer chlorophyll

Seasonal Cycle Reproducibility

Characterising the Southern Ocean seasonal cycle

Thomalla et al., 2011, Biogeosciences

High seasonal cycle reproducibility

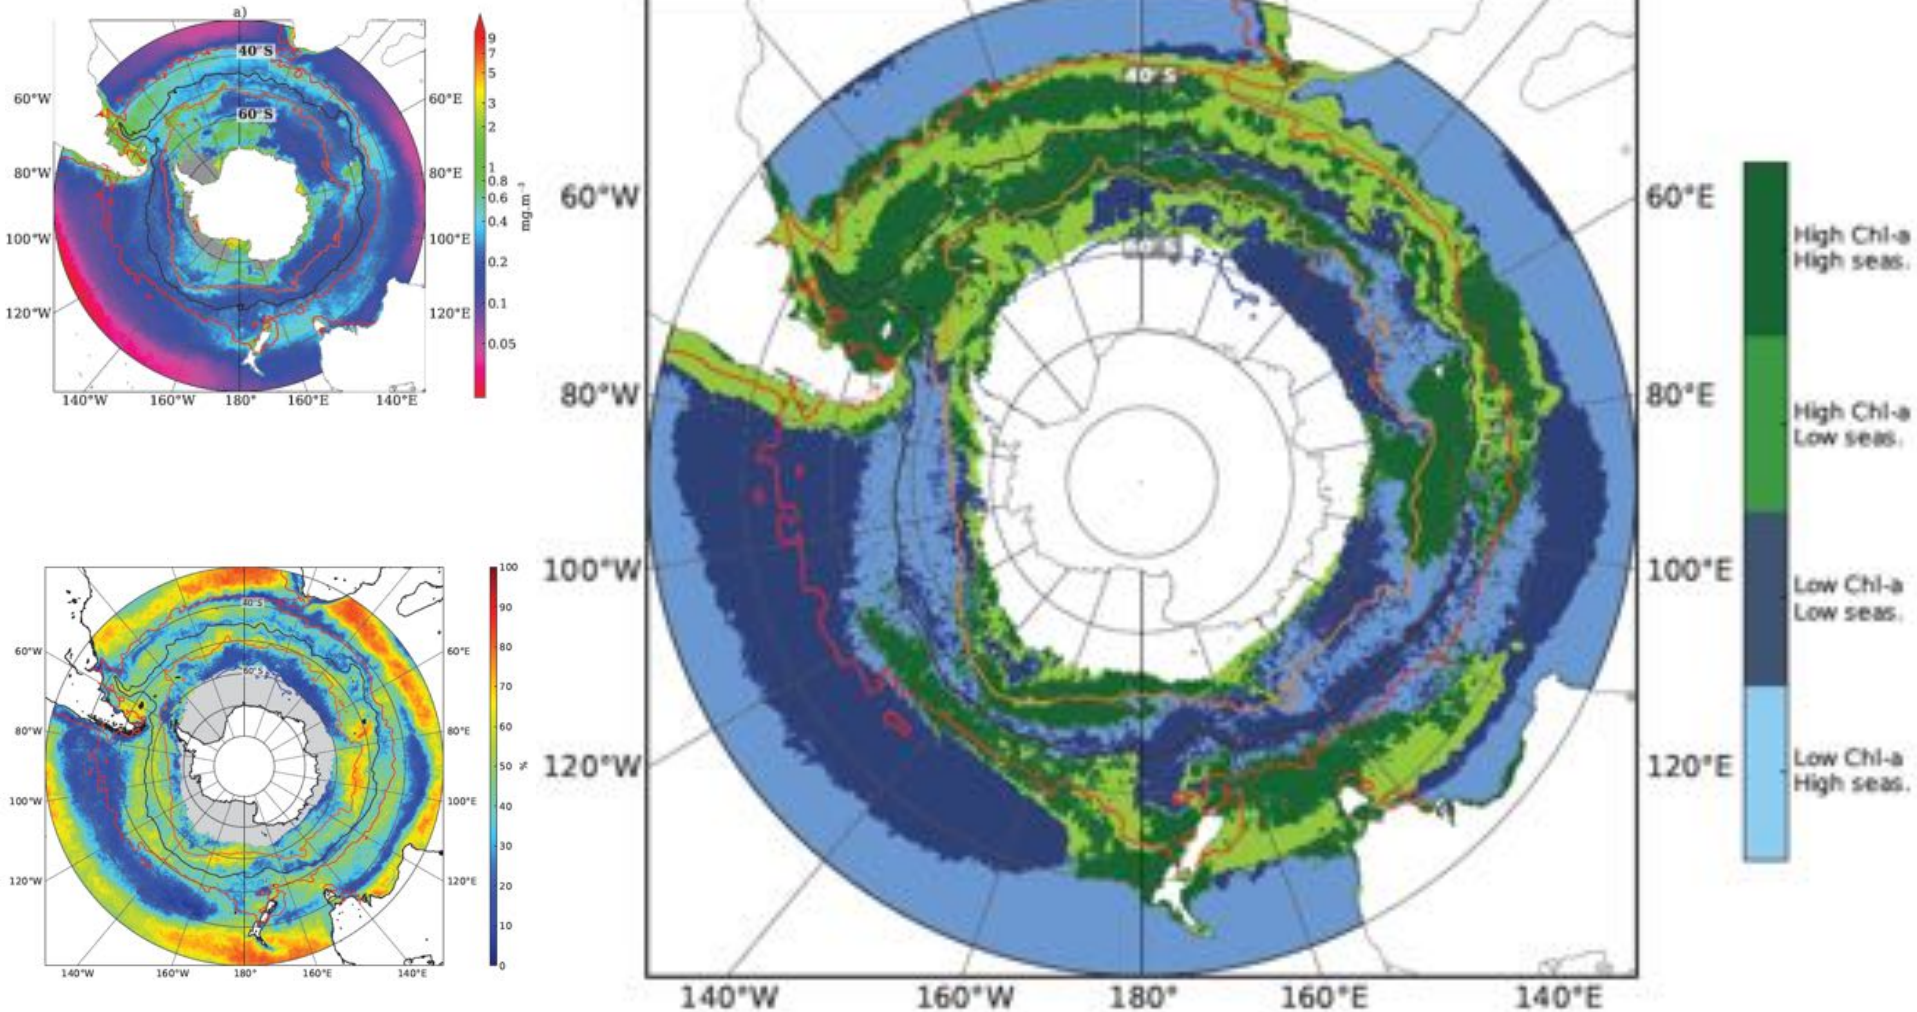

Characterising the Southern Ocean seasonal cycle

Thomalla et al., 2011, Biogeosciences

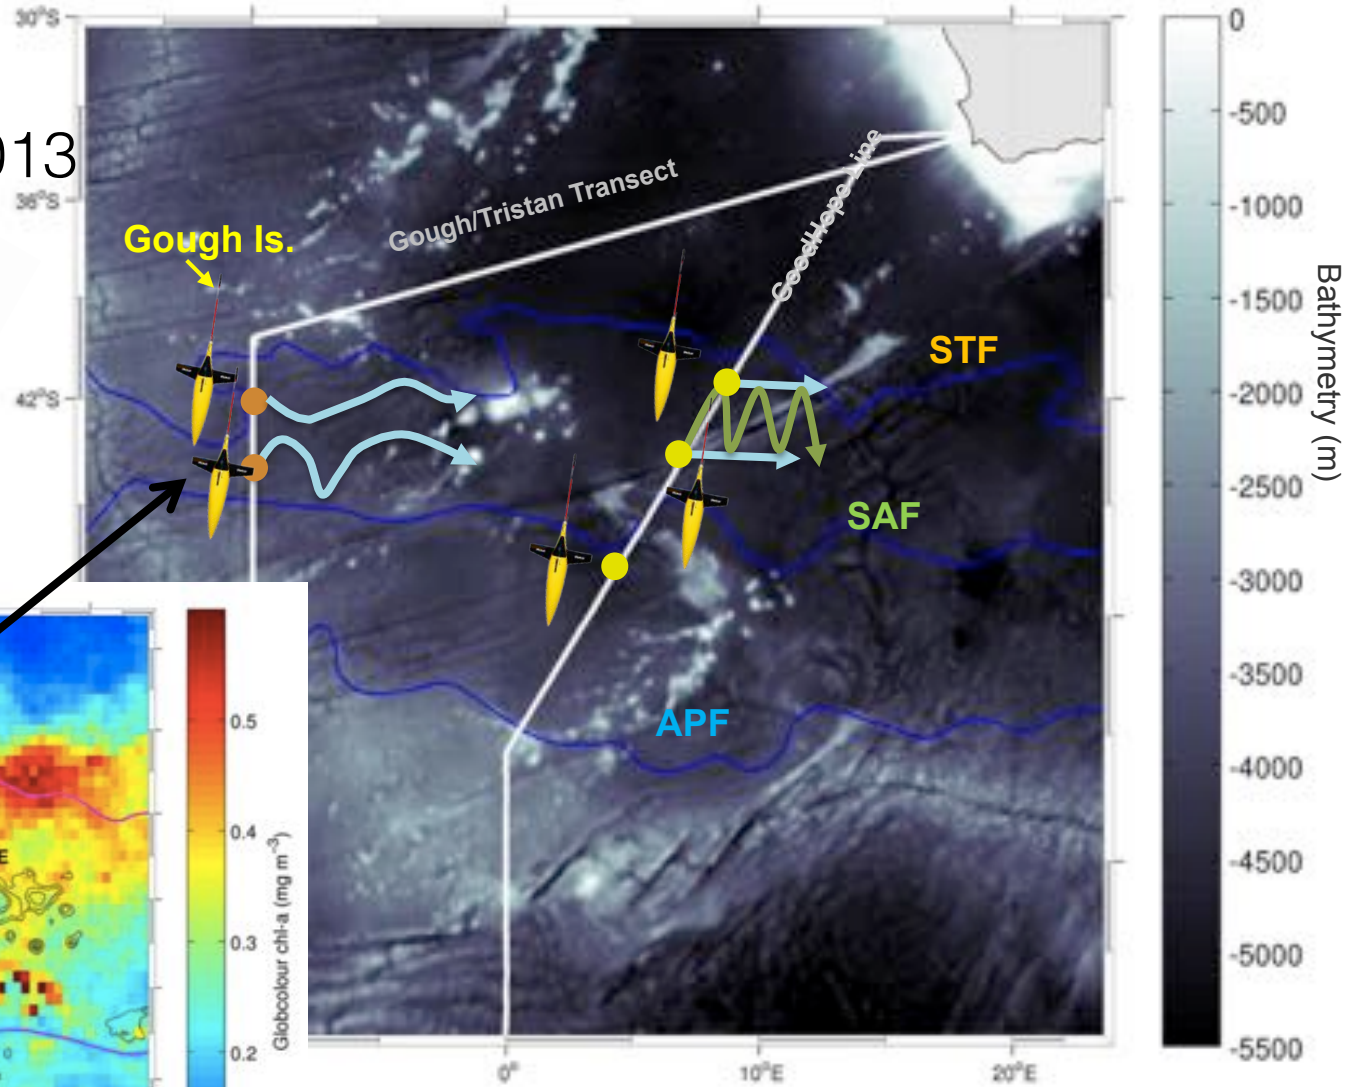

Characterising the Southern Ocean seasonal cycle

Thomalla et al., 2011, Biogeosciences

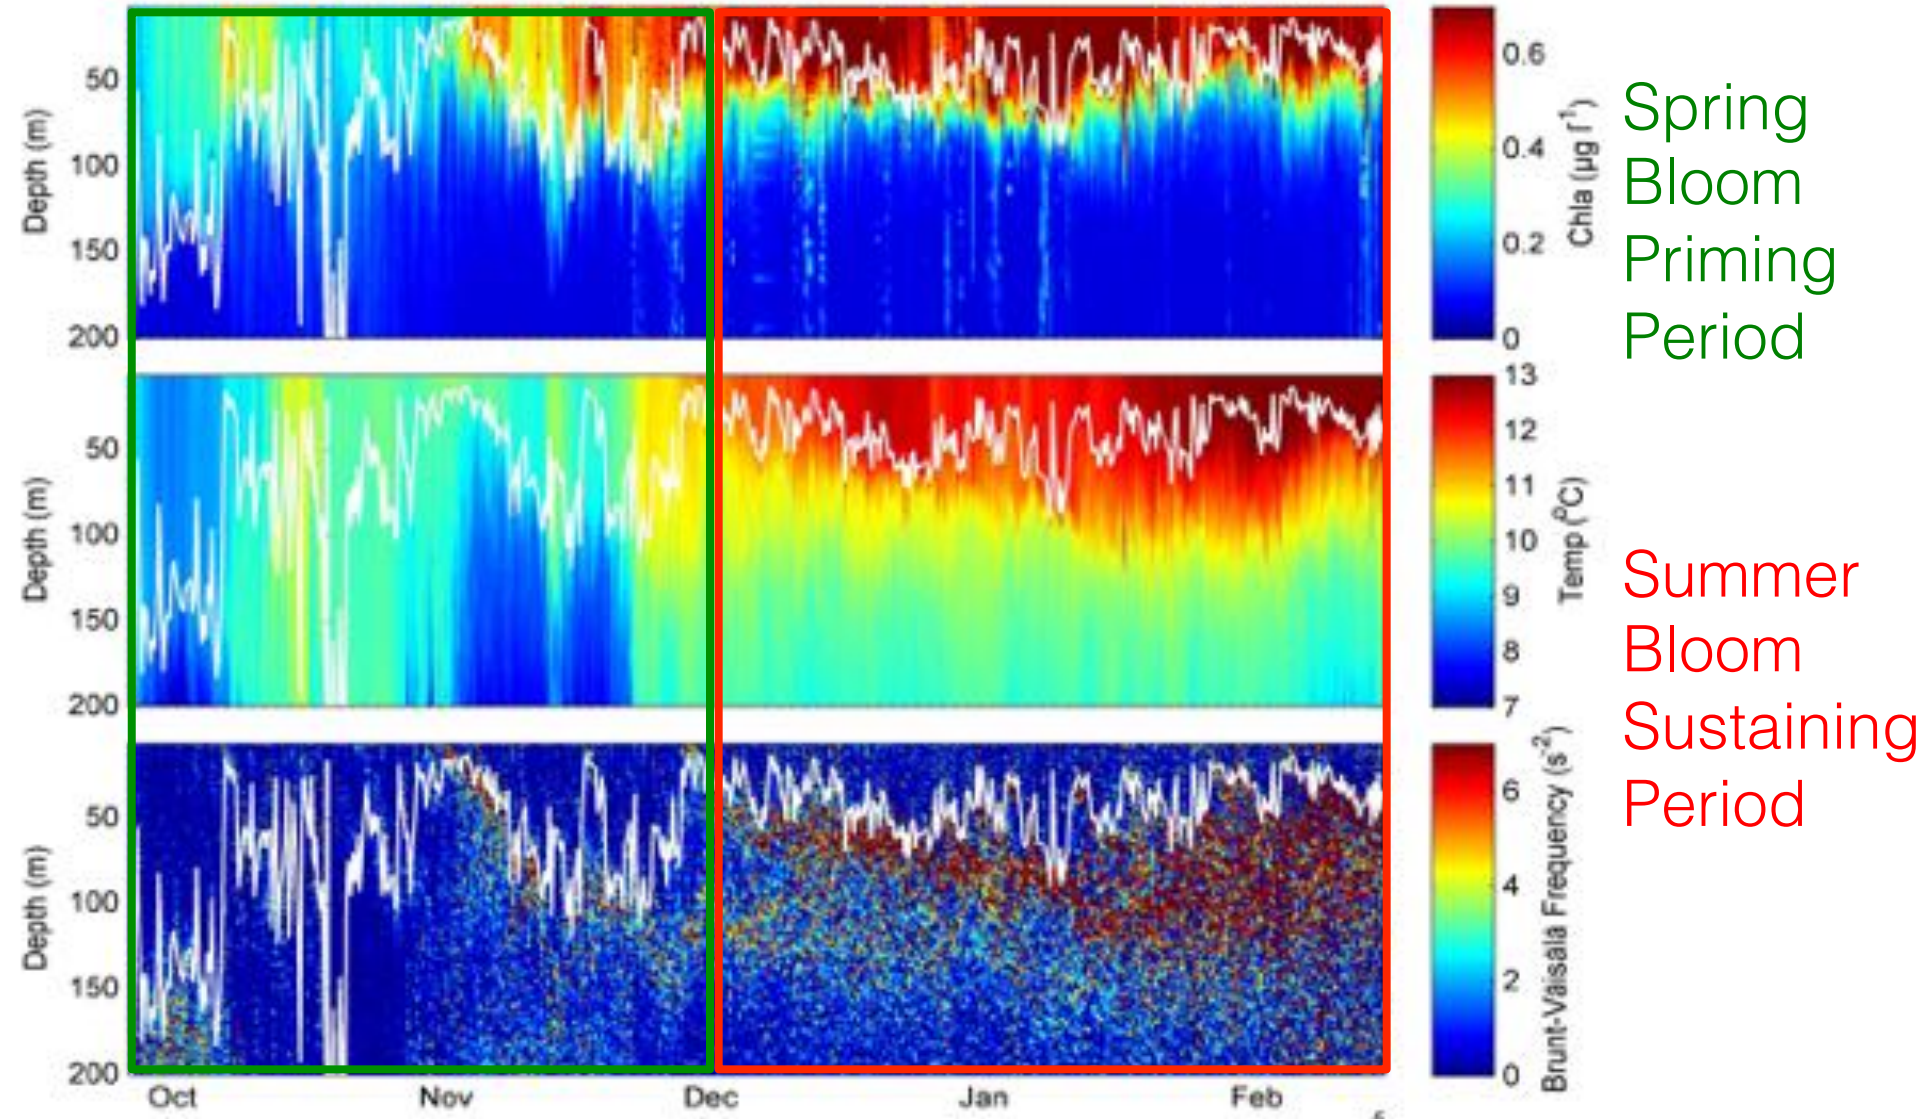

Southern Ocean Seasonal Cycle Experiment SOSCEx I

Sept 2012 – Mar 2013

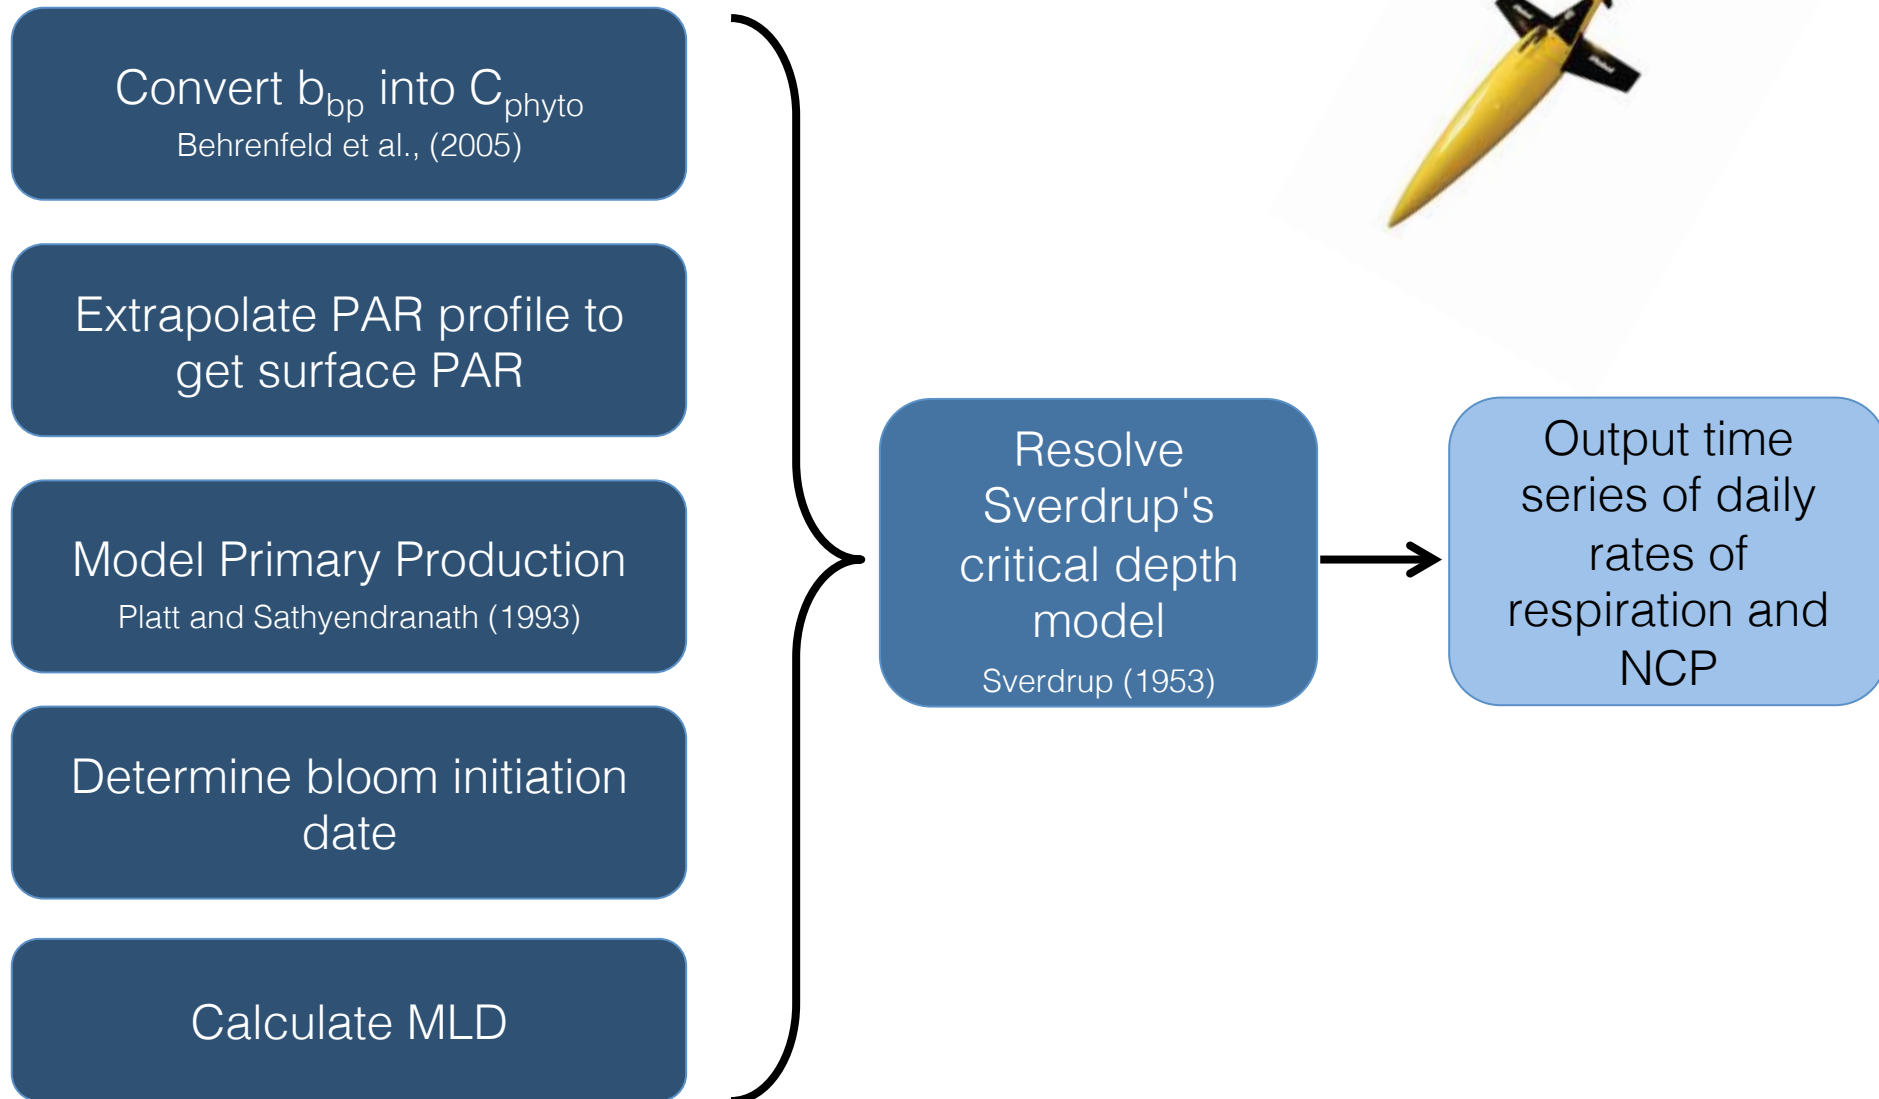

The seasonal cycle of mixed layer dynamics and phytoplankton biomass in the SAZ

Swart et al., 2015, Journal of Marine Systems

Bloom initiation and Net Community Production in the SAZ

Thomalla et al., 2015, ICES Journal of Marine Science

Bloom initiation and Net Community Production in the SAZ

Thomalla et al., 2015, ICES Journal of Marine Science

Phytoplankton carbon (C_{phyto}) and $\text{Chla}:C_{\text{phyto}}$ ratios from optical sensors on gliders

Thomalla et al., 2017, Frontiers in Marine Science

The model misrepresents the seasonal cycle of $\text{chl}a:C_{\text{phyto}}$ ratios

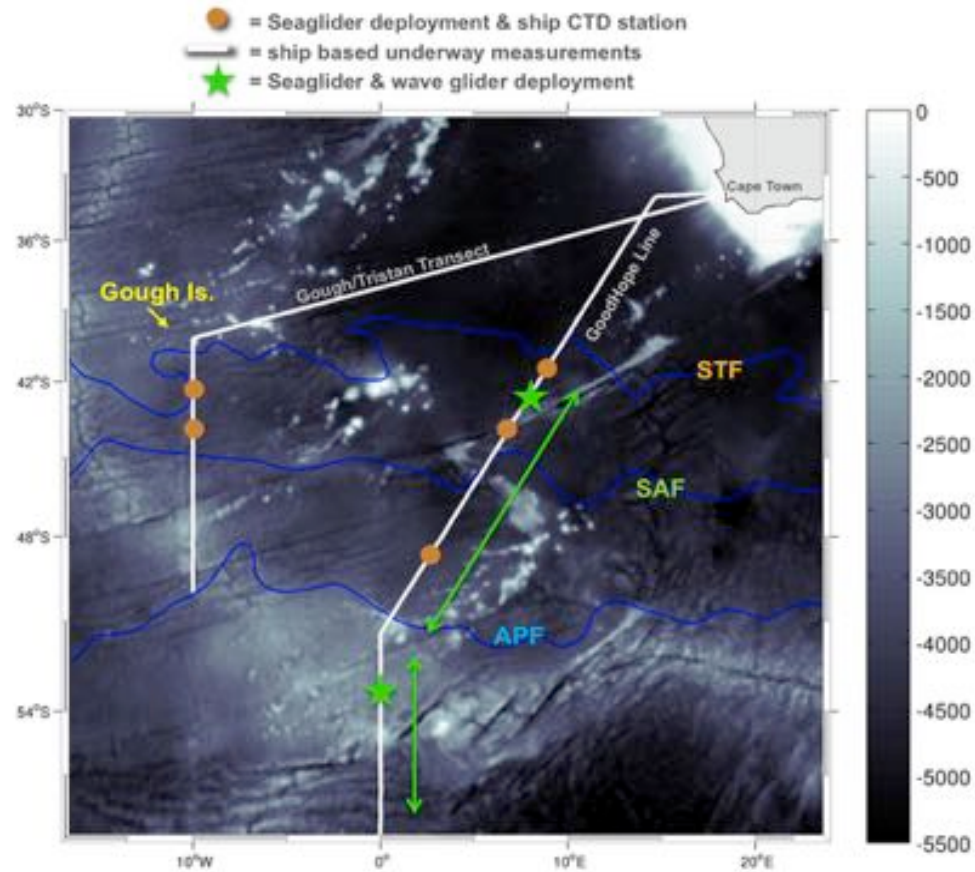

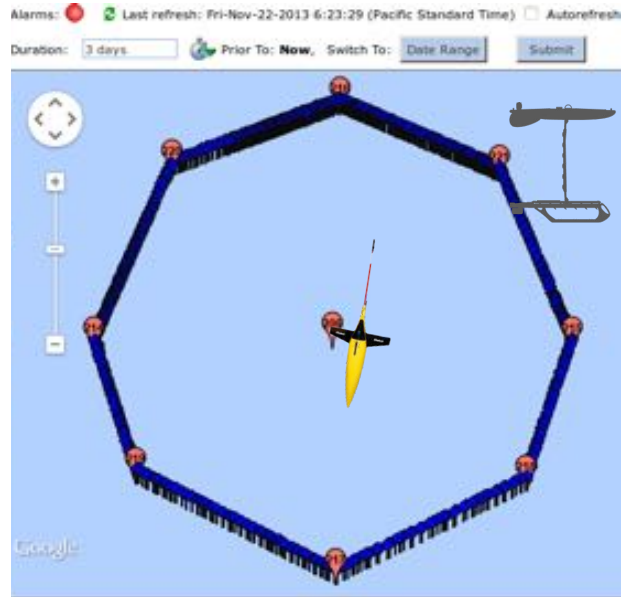

1. Models need to allow $\text{chl}a:C_{\text{phyto}}$ ratios that account for low light adaptation in spring and higher optimal $\text{chl}a:C_{\text{phyto}}$ ratios with increasing growth rates in summer

OR

2. There is a decrease in % contribution of C_{phyto} to b_{bp} as seasonal bloom develops i.e. methods need to account for variability of non-algal contributions to b_{bp}

SOSCEx II

Nov 2013 – Feb 2014

Intra-seasonal variability linked to sampling alias in CO₂ fluxes

Monteiro et al., GRL 2015

The SO contributes most of the uncertainty in annual flux estimates of CO₂.

Drive to reduce the uncertainty of annual mean flux below the 10% threshold required to reveal climatic trends.

Sampling intervals >2 days alias the seasonal mean flux due to storm-linked intraseasonal variability

SOSCEx - STORM

Dec 2017 – Feb 2018

- Slocum glider with turbulence package
- MicroRider: Velocity shear and thermistor probes

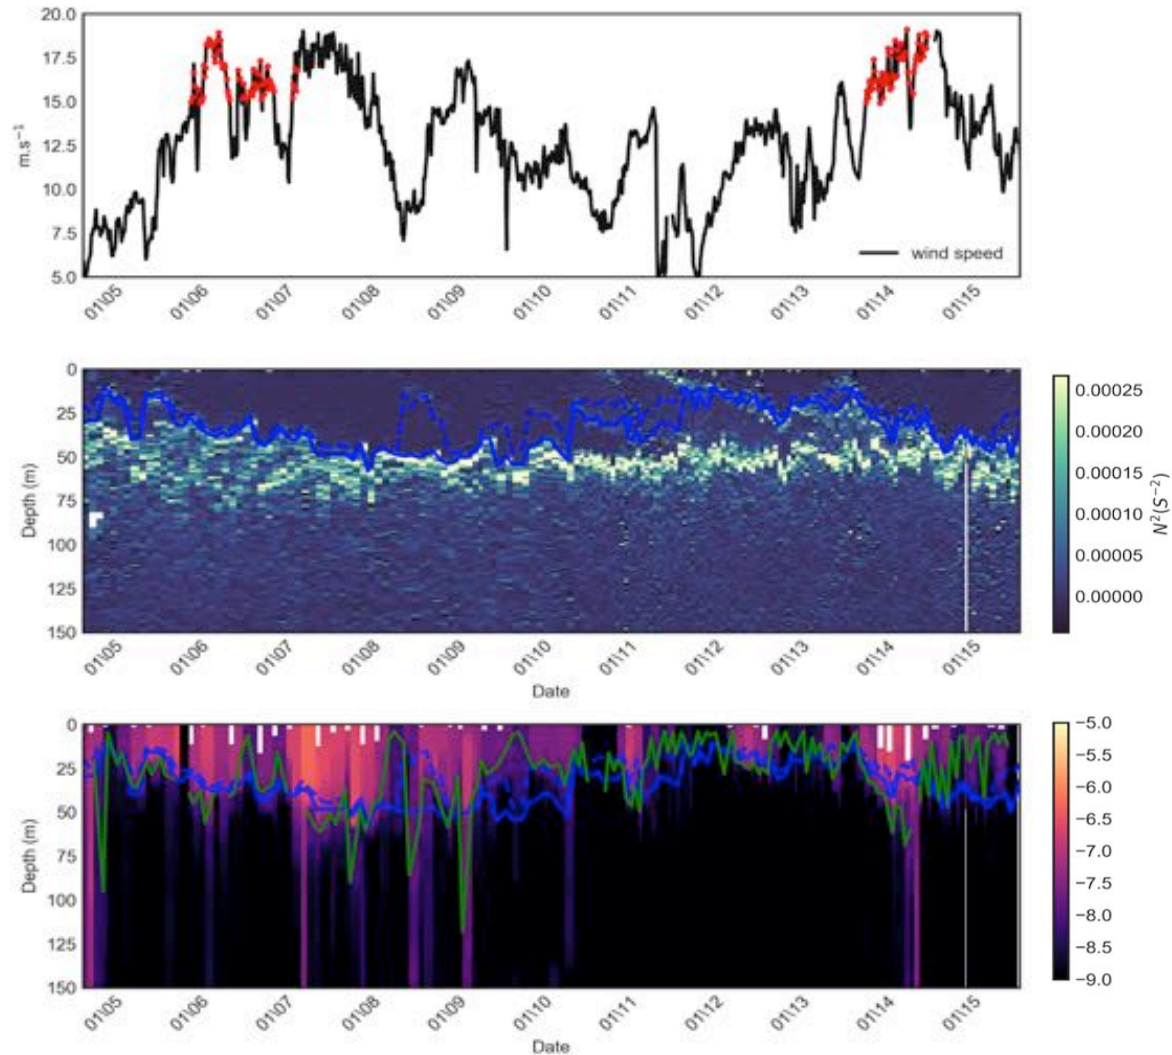

SOSCE_x - STORM

Nicholson et al., in prep

Storms Identified when
Pressure < 15%, Wind >
85%

Preliminary results show that
both the MLD (blue) and
mixing layer extent (green)
deepen in response to a
storm

SCALE

Southern oCean seAsonaL Experiment

A novel interdisciplinary experiment that spans seasonal to decadal time scales in the SE Atlantic sector of the Southern Ocean

SCALE HYPOTHESIS

Changes in seasonal modes of variability are a more sensitive indicator of long-term trends than changes in the magnitude of annual means.

- Twinned buoyancy + wave glider station
- ↕ Mobile buoyancy glider station following retreating ice edge
- Ship cruise track
