

Emerging New Technologies for ocean colour research

Radiometry recommendations:

- Individual global entities with emerging technology for radiometric systems for VC should all use “established (draft)” protocols of Zibordi and Voss.
- Need for International strategy for integration of all emerging technologies for VC of ocean colour satellites

IOPs recommendations:

- May need to consider a Centralized business-service model with complex technology that is emerging

HALE platforms:

- ESA Phi-lab funding programme for earth observation from HALE platforms; will there be a NASA analogue?
