

EUMETSAT Welcome: *some Ocean Colour highlights*

Dr. Bojan R. Bojkov

*Head of Remote Sensing and Products Division
EUMETSAT*

*International Ocean Colour Science meeting
Darmstadt, 01 December 2025*

EUMETSAT: serving Earth system science & our society

www.eumetsat.int

EUMETSAT is an intergovernmental organisation whose mission objectives are to:

- Establish, maintain and exploit European systems of meteorological satellites.
- Contribute to the operational monitoring of the environment, and of the climate and the detection of global climatic changes.

MTG-I, True colour RGB, June 2023

Ocean Colour: serving Earth system science & our society

www.eumetsat.int

In agreement with the European Commission, EUMETSAT is responsible for the operations of a large fleet of Sentinel satellites within the Copernicus Earth Observation Programme (Sentinel-3, Sentinel-4, Sentinel-5, Sentinel-6, and CO2M)

For Ocean Colour (or Aquatic Colour), EUMETSAT operates the Sentinel-3 constellation that carries Ocean and Land Colour Instruments (OLCI)

Sentinel-3 OLCI Level-1

- Operational and reprocessed (collection 4)
- Major updates:
 - TSIS-1 Solar Irradiance Reference Spectrum
 - Per-pixel Radiance Uncertainties included in the products
 - Spectral Temporal Model introduced
 - Geometric and Radiometric calibration revised

Sentinel-3 OLCI Level-2

- Operational and reprocessed (collection-3):
 - Good consistency between OLCI-A and OLCI-B
 - IOP new products included in Feb 2024

Data access via EUMETSAT Data Store

<https://data.eumetsat.int>

OLCI-A monthly chlorophyll coverage at 300m resolution

New products: Ocean Colour from geostationary orbit

www.eumetsat.int

Geostationary Meteosat SEVIRI and FCI instruments were NOT developed with Ocean Colour requirements

Meteosat demonstration products to showcase the value of GEO-OC

- Prototyping of products such as Turbidity, SPM, Chlorophyll (FCI only), cocco index
- Investigating different Atmospheric Correction approaches: standard, spectral-matching (POLYMER, FCI only), and Neukermans *et al.*, 2012, 2009

IOCS / IOCCG Recommendations

- IOCS 2013, 2015, 2019
- Geostationary Ocean Colour - Report 12

Meteosat Third Generation (MTG) Flexible Combined Imager (FCI)
disk observation every 10 min at 1 km at nadir

MTG FCI RGB and chlorophyll over Mediterranean, Ligurian Sea

Water Inherent Optical Property (IOP) products

- a_{nw} , a_{phy} , a_{cdm} , b_{bp} at 442.5 nm and b_{bp} slope from the three-step semi analytical algorithm by [Jorge et al., 2021](#)
- a_{cdm} at 442.5 nm by [Bonelli et al., 2021](#)
- K_d 490 nm by [Jamet et al., 2012](#), [Loisel et al., 2018](#)
- Optical Water Class (OWC) based on [Mélín and Vantrepotte, 2015](#)

Absorption by Phytoplankton at 442.5 nm [$1/m$]

[Zibordi et al., 2023](#)

ASSESSMENT OF OLCI-A DERIVED AQUATIC OPTICAL PROPERTIES ACROSS EUROPEAN SEAS

Giuseppe Zibordi¹, Jean-François Berthon², Marco Talone³, Senior Member, IEEE, Juan I. Gossu⁴, David Desvalley⁵, and Ewa Kwiatkowska⁶

Abstract—Marine data products from the Ocean and Land Color Instrument (OLCI-A) operated onboard the Copernicus Sentinel-3A satellite, were assessed using in situ reference

Nevertheless, the accurate determination of aquatic optical properties from space imagery requires a number of steps,

[Bracher et al., 2025](#)

ASSESSMENT OF OLCI ABSORPTION COEFFICIENTS FOR NON-WATER COMPONENTS ACROSS ALL OPTICAL WATER CLASSES

Arvid Bracher^{1,2,3,4}, Andrew Clive Barker^{5,6}, Hongyan Xu⁷, David Desvalley⁸, Juan Gossu⁹, Carole Lettrichet¹⁰, Rodrigo Martínez¹¹, Ewa Kwiatkowska¹², Sponza Chaitika¹³, Ewa Kwiatkowska¹⁴, Edo Pina¹⁵, Mariana Ribbenberg Sousa¹⁶, Jan Willem¹⁷ and Christian Zeng¹⁸

Absorption by Coloured Dissolved Organic Matter at 442.5 nm [$1/m$]
11 – 19 November 2025

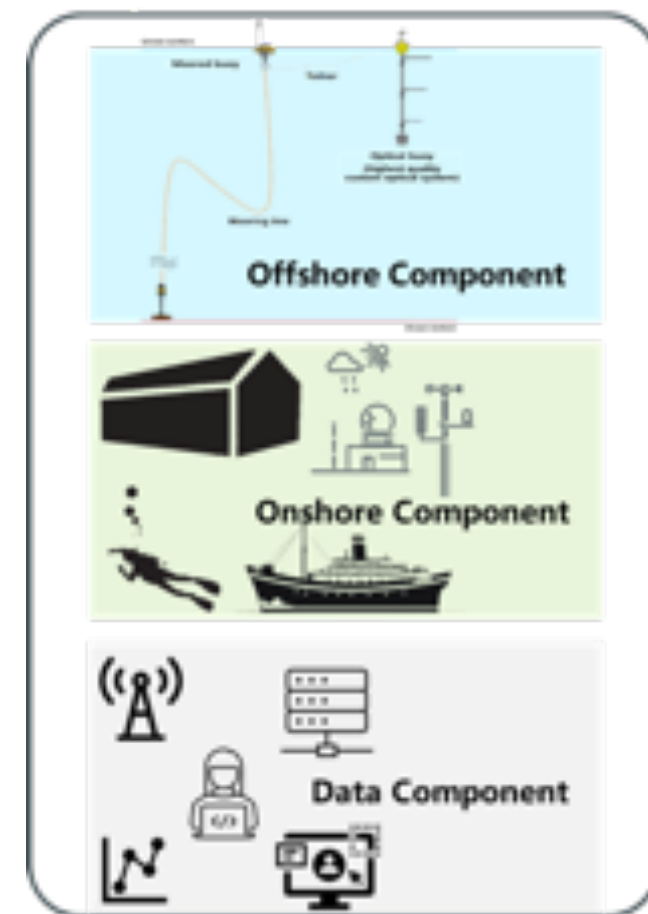

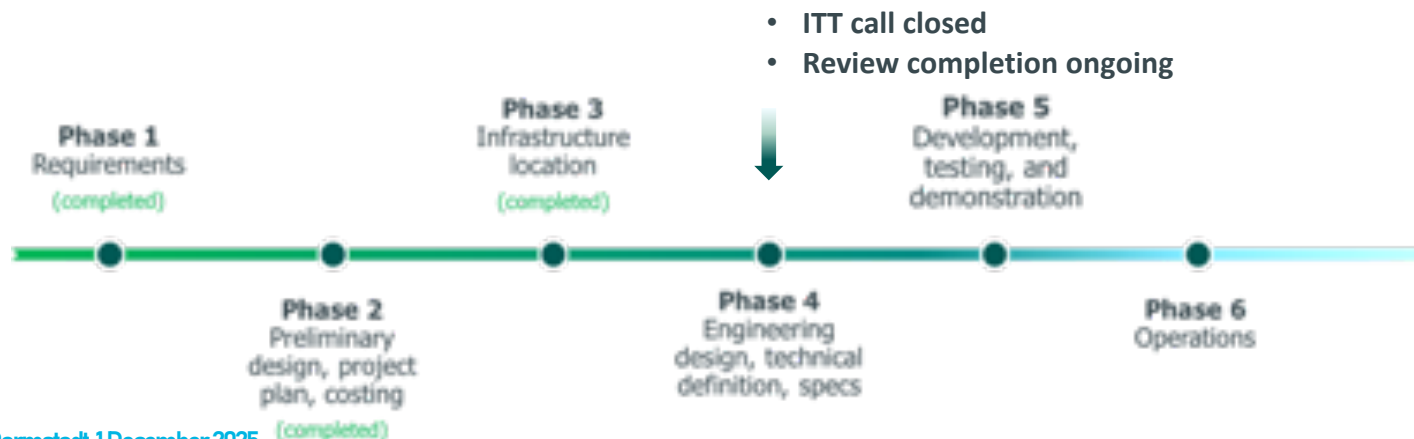

OC-SVC is a requirement (IOCS 2013, 2017, 2019, OC-SVC white paper) for all Ocean Colour missions
→ *one of the largest and most complex Fiducial Reference Measurements (FRM) activities!*

EUMETSAT manages OC-SVC activities on behalf of the EC Copernicus Programme:

- Establishing a European node of these unique OC-SVC infrastructures and securing European OC-SVC capability for its Copernicus missions (S3, S2, NG, Expansion)
- Standardising with NOAA's MOBY and NASA's MarONet
- Collaborating with NASA and the MarONet Team whose support is highly acknowledged
- Close oversight by the EC and the international Expert Review Board
- Free, full and open policy on data and code, complete infrastructure documentation
- <https://www.eumetsat.int/OC-SVC>

Many interesting topics will be covered this week: algorithms, new products, calibration and validation, FRMs and SOPs, etc.

Recommendations from IOCCG & IOCS are welcome!

Wishing you an interesting and successful IOCS 2025!
